

Hybrid Smartphone App Developer Hybrid Smartphone App Developer Hybrid Smartphone App Developer - Libya Pages IT. (Remotely) Tampa, FL More than 10 years programming, website and application development experience and more than 2 years in building a hybrid smartphone apps. I have developed and customized some multi-language interface (RTL) websites, applications and smartphone apps, as well as manage and resolve websites, hosting and domain issues. My goal is to find qualified job that suits and gives me the opportunity to show my skills and experience. Moreover, to improve my knowledge and skills.

Work Experience Hybrid Smartphone App Developer Libya Pages IT. (Remotely) April 2017 to Present

Developing a hybrid smartphone app for blood donation organization in Libya. (As volunteer job)

- Design colorful interface with four tabs using Ionic 2 framework, and customizing it with amazing non-standard font and RTL direction.
- Implement the app to provide (offline) access by using local SQLite database, which updated at the first time ever running and/or at each time the app started (if this option enabled by the settings). Although the app provided a button for this function as needed.
- Updating local SQLite database done through API, this API contact and access online MySQL database using http request, then send SQL query using PHP as a back end. Query results will send back as JSON format to feed the local SQLite database. Since each http request will take different time, therefore I used Angular 2 promises in order to offer asynchronous manner.
- Implement lookup form using (Ionic 2 component, Angular 2 and Type Script) to select blood type and city, and then grab related donors' information as needed and show them as searchable list.
- Implement filters through Angular 2 pipes to provide result search option as needed. And also provide slide feature to show details, call or send SMS to the donor.
- Implement an add data form to add new blood donor to the online MySQL database directly.
- Implement setting tab to enable/disable features, as well as to provide login area for donors to access their online accounts and make some changes as needed.
- Design splash and icon via Photoshop and use Ionic 2 framework to generate splashes and icons for all screen sizes.
- Customize config.xml file as needed.
- Issuing developer certifications and provisioning profiles for both iOS and Android.
- Generate .ipa and .apk files through Ionic 2 framework.
- Create Apple and Android developer account, and submit the generated files to Apple

store and Google Play store. Web Developer at Libya Pages IT Libya Pages IT. (Remotely) March 2017 to Present Customizing X-Cart shopping system to make it Fully RTL supported. Installing X-Cart 5.x and setup the online store. Customizing CSS file in order to make it RTL supported using direction, text align and floating. Create module to apply new CSS file as override style sheet. Customize some .twig files to offer fully RTL support. Web Hosting Specialist and Website Developer Libya Pages IT February 2003 to Present Website designer using multiple languages and tools such as: HTML, HTML5, CSS and it's framework, PHP, MySQL, JavaScript, Photoshop, Flash and more. Managing dedicated web servers, VPS and Sheared hosting resellers. Registering, renewal and transfer TLDs through ENom. Registering, renewal and transfer cc TLDs (.LY domains) through LTT. Fix bugs and resolve hosting and email issues. Event Reminder App, Angular-6-and-Firebase October 2018 to December 2018 This app was developed for training purposes. The app able to add, manage and send reminders of events (notification), the app has several features and functions, and it was developed using Angular 6 and Firebase.
