

Full Stack Developer Full Stack Developer Full Stack Developer - Panasonic Avionics Stockton, CA

Versatile full stack senior developer, employing many different languages and tools, seeks a challenging front end or full stack role at a company that desires a highly motivated, self-starting team player able to implement solutions using the latest technologies, while adhering to the highest standards.

Work Experience Full Stack Developer Panasonic Avionics - Pleasanton, CA February 2019 to Present Contract

Development of Ecommerce app for seatback monitors installed on major airlines, allowing passengers to purchase movies, music, games and more during flights

Tasks:

- Lead project development of Ecommerce app and integrate to AWS Cloud Services (Deployed on docker: PHP, Nginx, MySQL on EC2)
- Support code for React app that measures analytics to assist airlines in making decisions of what products to include on their seatback apps to maximize product sales

Achievements:

- Implemented OAuth authentication for Ecommerce app to auto log on users and staged app on AWS EC2
- Assisted other front- end developers having no previous experience in React development

Lead Microservices Developer - Contract Barrick Gold Corporation - Pleasanton, CA February 2018 to February 2018

Rest API Development for internal, company-wide big data project to track analytics of equipment being used at company gold mines in order to keep accurate track of maintenance schedules and reduce costs

Tasks:

- Created AWS Lambdas using Golang and wrote unit tests
- Configured Serverless and Gitlab CI/CD scripts to deploy Lambdas to AWS multi-stage environment
- Set up API integration testing with Node and ran during CI/CD builds.

Achievements:

- Saved company budget by not having to hire another developer by successfully meeting all deadlines that was assumed would require two developers
- Despite having no previous knowledge of Go, Serverless and AWS, handled all required tasks

Senior Front- End Developer WALMART LABS - San Bruno, CA September 2016 to February 2017

Contract

Development and support for Walmart.com production site

Tasks:

- Fixed multiple device bugs using simulators and other tools
- Lead ADA Project to address accessibility violations reported on Walmart.com
- Participated in code reviews

Achievements:

- Fixed number of difficult to diagnose bugs on iPads and mobile phones, that were on the backlog after other developers were unable to find solutions
- Resolved several critical accessibility issues with React

components including page wide keyboard navigation, keyboard control of carousel widget and added aria tags to support speech synthesizers

Senior Front- End Engineer - Contract STANFORD UNIVERSITY - Stanford, CA October 2014 to September 2015 Lead front end developer of mid-term and final exam Chromebook app for language school

Tasks:

- ? Integrated microphone support to record student answers to oral questions
