

UI/UX Lead Developer UI/UX Lead Developer UI/UX Lead Developer - Thales Avionics Melbourne, FL

Experience in developing web-based applications using HTML, CSS, JavaScript, JQuery & AJAX. Experience with Javascript frameworks like Angular & Ionic Experience building full stack dynamic web applications using MEAN stack W3Schools Certified HTML5 developer.

Experience in deploying apps to AWS - EC2, S3. Experience developing interfaces for SAP using Ruby on Rails Experienced on application development consuming RESTful webservices.

Experience designing DB Schema and SAP management. Developed utility test frameworks using Jasmine framework & PhantomJs. Developed gaming & utility applications for STB platform with embedded Galio & Webkit browsers. Expertise in Cable Set-top Box domain and hands on experience on its various modules Experience developing(webUI) & testing applications on LTE-Gateway devices that uses OMA-DM for provisioning/upgrading devices using FUMO/FOTA push updates on its Smart Home network. Worked with JSHint, JS-beautify, CSS Lint for ensuring code quality. Worked with SCM tools like GIT, Tortoise SVN. Experience with Agile methodologies, Scrum roles and using Rally/Jira. Worked on several defect tracking tools like CDETS & Bugzilla for efficiently tracking and fixing bugs. Experience working on several debugging tools like Espial debugger, Ant-CDK, etc. Worked with Appium/Pytest, Selenium based automation testing for Apple (ATV3/ATV4)/ Android(Amazon Fire TV) and other OTT devices.

Expertise in creating conceptual designs using editing tools like Adobe Photoshop, Illustrator, Sketch, Gimp & Inkscape. Possess good interpersonal and communication skills. Enthusiastic & self-driven, with a high degree of commitment.

Work Experience UI/UX Lead Developer Thales Avionics - Melbourne, FL September 2017 to Present

Project: CSS-Firefly: Maintenance Tool Enhancement & Integration with SAP

Project Overview: This project is for creating a new Aircraft maintenance tool for managing and tracking all the maintenance work done for the LiveTV & CTV customer's aircraft. It involves understanding of the existing tools used by different customers that is on MS-Silverlight(to be obsolete) and re-engineering the features with enhancements. This tool is designed in a way to take inputs from various external sources from the aircraft & customer and process reports for understanding Mx trends. Complete redesign of UI was required to

accommodate all the features and the goal was to provide a tool to the aircraft Mx team that is fast and efficient. This project also involves development of various other utility tools for Operations & Supply chain

Responsibilities: Responsible for creating new web application for Aircraft maintenance. Responsible for requirements gathering from various teams within Airport Mx & other Technical teams in various geo-locations. Understanding the hooks between existing Avionics Mx tools and SAP along with the external data sources from Aircraft. To redesign the DB schema and support data migration to the new application Create wireframes for the new tool Designed the POC web pages using JavaScript, HTML, Bootstrap CSS Developed application using Angular To understand SAP business logic and its interfaces with tool Write test suites for testing various functionalities Deploy applications on AWS Brainstorm various features for enhancing user experience Maintain database for inventory & part management. Design web page with easy access to the various aircraft management modules Ensured cross browser compatibility by including compatibility libraries. Develop utility applications for managing contracts and alert management using MEAN Demonstrate new applications & POC's to different customers

Managing SCM tools and repositories in GIT. Document the requirements for new application

Technologies: Angular2/4/7, SAP, Javascript-ES6, Stimulus, Chai, Ruby-Rails, RxJS, MySQL, jQuery, MEAN, HTML, Bootstrap-CSS, Node.js, Docker **Tools:** Jira, GIT, Xampp, node-cli, Gulp, Grunt, Other Avionics Mx tools(LW, Servo)

PROJECT 2: UI/UX Lead Developer TECHNICOLOR - Indianapolis, IN July 2016 to August 2017 Project: TCH Homeware LTE Gateway for Verizon

Project Overview: In this project we develop features for TCH-Technicolor Gateways specifically for Verizon client. TCH Gateways are basically developed on Homeware stack on top of OPENWRT. This being a LTE Gateway, uses LTE N/W for WAN connectivity as well supports integrated Home automation solutions by using various TCH specified automation sensons

Responsibilities: Implementing new features on the Gateway webUI. Implement GUI for supporting home automation sensors that are connected to Gateway. Implemented the Gateway Parental Controls feature by manual DNS blocking Verifying/flashing production builds using OMA-DM

Performance improvements on webUI Implementing new device configurations POC's for webUI

improvement using CSS3 animations, D3 & Bootstrap Supporting the production and testing for issues resolution. Debug the code in Gateway using different techniques Managing SCM tools and repositories in GIT. Flashing the code to device both locally & remotely. Interact with clients on daily basis both onsite & offshore Maintaining documentation on Confluence. Technologies: Lua, Nginx, D3, Angular, ReactJs, JavaScript, Typescript, JQuery, HTML, CSS, OMA-DM, Shell scripting, Bootstrap, CSS3 Tools: WebStorm, Code collaborator, GIT, Beyond Compare2, IntelliJ Idea 7.0.3, Putty , Jira.

PROJECT 3: Sr. Software Engineer CISCO SYSTEMS - San Jose, CA
January 2016 to June 2016 Project: Infinite Video - SPVSS Project Overview: Infinite Video is a market leading SaaS product enabling organizations to rapidly launch a full range of video services via any device, anywhere, any time. IV allows its customers to configure the contents using a cloud based application (Uplink) deployed on AWS. This POC is for developing application for managing video services provided by Cisco infinite video(PaaS) platform. Responsibilities: To lead both application development & QA team for IV application validation on all streaming devices Initiate project team at offshore and onboard members to the team Design and develop the video/content management tool To understand the existing code and sequence. To interact with clients and create mockups/prototypes for demo To demonstrate App install/launch features. Write new test framework for ATV3 device. Assign and manage tasks for onsite & offshore teams using Rally/Jira Automate cloud application(Uplink tool) testing using Selenium Test script writing for various playback features. CI test pipeline in Jenkins. Technologies: Angular, Appium, Selenium, Android, iOS, Bootstrap, JavascriptJenkins Tools: Xcode 8 Beta, Appium, Android Studio, ATV4/ATV3 simulator, Jira.

PROJECT 4: Senior Software Engineer LARSEN & TOUBRO TECHNOLOGY SERVICES - Atlanta, GA
January 2015 to December 2015 Project: Genus - Genre based Guide (POC) & Integration Project Overview: To develop a Genre based user Guide for Set Top Box users that integrates IPG, DVR and VOD contents. To provide an enhanced tile based grid/swim-lane view that is sorted by Genre which serves as a gateway for both aired & recorded media. This is a POC done for various cable customers with a scope of both embedded and mobile application development. Responsibilities: Initiate the project and provide mock ups for different views.

Develop genre based Guide application using AngularJs, W3.CSS,PHP, Javascript & HTML.

Porting and testing with different Set-Top Box platforms. Maintaining large bundles of poster-arts for tile elements using JSON. To perform validation on user preferences for user based content.

Integrate application with existing set-top box applications. Define apis for maintaining channel/recording objects (creation/updation). Manage UI repository and responsible for tag

releases in GIT. Conduct daily scrums, bi-weekly retrospectives for the sprints. Demonstrate

features and applications to various customers and development teams. Technologies: ANT-SDK,

PHP, HTML5, CSS3, JavaScript, Angular.js, Bootstrap, jQuery, AJAX, JSON Tools: Jira, Code

collaborator, GIT, Jenkins, IntelliJ Idea 7.0.3, Putty, Test rail, Photoshop, Zeplin. PROJECT 5:

Software Engineer CISCO SYSTEMS - Atlanta, GA October 2013 to December 2014 Project:

Vantage Sustenance - Tiger Team Project Overview: To work with Vantage Sustenance team for

effectively fixing high priority customer issues and provide a bug free UI/UX experience. Enhance

Guide performance by prototyping various techniques for improvement along with other

performance enhancements. Responsibilities: Develop new approaches for improving Guide

performance on STB. Rectifying customer/field issues reported on UI applications using HTML,

CSS & Javascript. Support for fixing issues from production/field and released versions of the RTN

applications. Involved and worked with performance improvement team for achieving desired

performance on STB. Responsible for triaging the issues reported from customer /consumer end.

Supporting the production and testing for issues resolution. Debug the code in set top box using

different debug techniques including CDK, Espial debugger. Managing SCM tools and repositories

in GIT. Flashing the code to the STB's on the development stack. Package management

through DNCS. Documentation of Application requirements & feature implementations.

Technologies: Object Oriented JavaScript, JQuery, HTML, CSS, Shell scripting, RESTful Tools:

Beyond Compare2, IntelliJ Idea 7.0.3, Emulator, Putty, Meld, Ant PLC, SCM-GIT, Code collaborator,

CDETS. PROJECT 6: Associate Software Engineer LARSEN & TOUBRO INFOTECH LIMITED -

Bengaluru, Karnataka March 2012 to September 2013 Project: FIP - Feature Improvement & Bootup

optimization for RTN Applications Project Overview: Feature improvement Program for Vantage is

for developing new enhanced features for cable STBs using HTML, CSS & Javascript. The features include slow play, parental controls, DVS audio support, support for multiple audio selection, reminder handling for PPV programs, pip/pop, etc. This also includes optimization of bootup time using various techniques. Responsibilities: Develop various enhancements for STB that works well with G6/G8 & G10 platforms. Developed Reminder, DVS support and slow play features. Worked on enhancement of Parental controls with time input selection. Devise several approaches for improving bootup time optimization based on user surveys. Proposed several features for enhanced user experience. Fix bugs reported on newly developed features by the QA team. Manage user stories in Rally. Design and document feature implementations and maintain backlogs. Coordinate with onsite team for performance results on new features. Technologies: JavaScript, JQuery, HTML, CSS, Shell scripting, RESTful Tools: ANT CDK/SDK, Beyond Compare2, IntelliJ Idea 7.0.3, Emulator, Putty, Meld, Ant PLC, SCM-GIT, Code collaborator.

PROJECT 7: Associate Software Engineer Trainee LARSEN & TOUBRO INFOTECH LIMITED - Bengaluru, Karnataka July 2011 to February 2012 Project: RTN 3.0 - Utility development Project Overview: This project is for developing utility applications for RTN 3.0 Set-Top boxes with G6 platform. As a trainee, apart from being trained in several programming languages & embedded web technologies, this project involves creating independent modules for several repetitive tasks like creating and displaying dialogues, DOM manipulations, measuring performance, image spriting and developing light weight games suited for STB environment. Responsibilities: To design and develop games suitable for Set Top Box browsers using HTML, CSS, Javascript & JQuery. Developed Number Puzzle game that can be played on TV using remote controls. Develop various utility modules that are helpful for day to day development, based on inputs from development team. Responsible for creating image sprites to improve STB performance. Develop new skins for cable card boxes. Demonstrate developed utilities across different teams and customers. Write test cases and execute test on developed features Document developer manual for the development teams. Technologies: Object Oriented JavaScript, JQuery, HTML, CSS, Shell scripting Tools: Beyond Compare2, IntelliJ Idea 7.0.3, Emulator, Putty, Meld, Ant PLC,
