

Front End Developer Front End Developer Full Stack Developer with a passion for Design Forest Hills, NY <http://karlrodulfo.com> I'm a full-stack developer with a passion for design looking to create elegant, intuitive, web products for companies eager to disrupt their industry. I have experience in HTML5, CSS3, Ruby on Rails, React / Javascript, and many other frameworks and languages. I love the creative challenge of bringing a vision to life, and thrive on creative problem-solving it involves. After working for the past decade in television production, I saw the media world transform and practically turned on its head. Media was changing, and I wanted to be a part of that, so I took the plunge, switched careers, and become a web developer. I've always had a love for tech and new media, and rather than watch the media world transform while I'm in the sidelines, I wanted to be one of the people shaping its future. Television and web development aren't entirely unlike; they both involve using creative solutions to bring an idea to life. Moreover, my experience in content generation for television has given me the skills to work adeptly with tight deadlines, and high-stakes & big-budget projects. And perhaps most importantly, I've learned how to quickly build deep and trusting relationships with partners, peers, and executive leaders. With these strong transferable skills, I believe I can be a huge asset to your team and help in delivering your company's mission and vision. I'm eager to bring my proven abilities in web development, project management, and creative editorial to companies looking to make a mark. Authorized to work in the US for any employer Work Experience Front End Developer Unpakt.com - New York, NY November 2018 to Present Facilitated the migration of high traffic e-commerce web application from old frameworks(Ruby on Rails, Angular) framework to React JS Oversees front- end development and creation of multiple apps and features across thegrowing Unpakt product line.
