

Full Stack Developer Full Stack Developer Full Stack Web Developer | React, Redux, Ruby on Rails, JavaScript, Wordpress Sunrise, FL Throughout my years in the business development industry I did sales, marketing, management and some finance. Even though all the positions were different, they all had something in common... drum rolls... technology. I found it mesmerizing how all my previous positions rely heavily on technology, and how having a wifi issue at work will immediately kill the productivity for the rest of the work day. My curiosity started to kick in and I decided to dwell into the magical world of technology. After some googling and a quick tutorial I was able to show the string "Hello World" in my console. It was my first line of code, my first time given a computer a command. I was in shock, it felt so good, it was like acquiring a super power. The more time I spend coding the more I enjoyed it, so I decided to take a leap of faith, learn to code and transition my career to the technology sector. I enrolled in the online full stack web development program at Flatiron School where I obtain skills in HTML, CSS, Ruby, Ruby on Rails, JavaScript, React, and Redux. Now I want to join my new web development skills with my business development background and help companies achieve their full potential. If you want to take a look at my code check my GitHub account at: <https://github.com/etellezp> You can also find me at my website: <https://tellezweb.com> Authorized to work in the US for any employer Work Experience Full Stack Developer Flatiron School - Sunrise, FL January 2019 to Present Technical Projects: Uncubicle: A React frontend with Ruby on Rails backend that let's you find workers for your event + GitHub link: <https://github.com/etellezp/event-jobs-client> + Use Redux library for state management + Use Ruby on Rails as an API + Use fetch API to communicate between the backend and frontend + Use Bootstrap for styling Materia Prima: A Ruby on Rails application that let's you find raw materials + GitHub link: <https://github.com/etellezp/materia-prima> + Use MVC pattern + Restful routes + It has CRUD functionality Scuba Records: A Ruby on Rails application that let's you search for dive sites and record dives + GitHub link: <https://github.com/etellezp/ScubaRecords> + Use JQuery for frontend and DOM manipulation + Use Devise gem for login and logout functionality + Use Bootstrap for styling Web Developer / Manager Express Machinery Solutions - Miami, FL February 2016 to January 2019 + Developed the business website for the company *
