

.Net Developer .Net Developer Sr Software Engineer Apopka, FL An experienced, results-driven Sr Software Engineer with a diverse skill set and a reputation for deriving creative solutions to resolve impossible tasks. Proficient in solving complex problems that meet business needs from the perspective of a passionate engineer. Expert in designing and developing fault tolerant web service integrations. Self-motivated individual with high integrity, strong work ethic, and the ability to prioritize substantial workload.

Work Experience .Net Developer AssistRx - Orlando, FL February 2019 to Present Work with a team to develop and maintain a series of .Net Core microservices and Mule ESB Applications that interact with a large scale Salesforce platform using custom Apex classes and triggers.

Software Developer Kforce - Maitland, FL September 2018 to Present Working on site with a major telecommunications company to develop a golang ETL process to generate a near real-time inventory of cellular components and their operational status

DIRECTOR OF SOFTWARE ARCHITECTURE BOOKIT.COM 2018 to Present

- Manage multiple development teams working in both Scrum and Kanban agile processes
- Oversee the deployment of multiple PHP and EmberJS applications
- Review of all application code to provide developers with architectural solutions, and deployment planning
- Interviewing, hiring, and onboarding of all new developers
- Reporting on general application and system health
- Provided outline for all application and system modifications required to migrate to PHP 7
- Evaluation of new frameworks and utilities
- Provide systems administrators with solutions for production application and system related issues

Software Developer Kforce - Maitland, FL September 2018 to February 2019 Working with a major telecommunications company to develop a Golang ELT process to maintain a near real-time inventory of cellular service components and their operational status

SR WEB DEVELOPER BOOKIT.COM 2013 to 2018

- Maintenance and feature development of an enterprise legacy PHP application
- Introduced Vagrant to standardize the development environment
- Created repeatable processes using the Phing build tool
- Migrated systems from PHP 5.3 to 5.4 and later to 5.6
- Integrated multiple credit card processing systems including Stripe, Braintree, and Amex
- Led initiative to integrate NewRelic, Statsd/Graphite, and ELK (Elasticsearch, Logstash, and Kibana) to gain visibility into application behavior
- Implemented and maintained Jenkins CI server

to automate deployments to QA and Staging servers      Developed ZF 2 microservices for management of payment related systems      Maintained Symfony2 application used to process OTA (Open Travel Alliance) messages and serve ARI (Availability Rate and Inventory) data      Developed Doctrine Annotation driven framework to transform existing data models into a JSON+API format that is consumed by an EmberJS applications      Defined methods for deploying EmberJS applications through existing proprietary deployment tools      Integrated Composer dependency manager into the development process      Optimized configuration of Symfony2 applications for production use      Integrated with multiple third-party systems for reservation processing and delivery using SOAP and REST services      Integrated Docker and Docker Compose into the CI process to perform multiple concurrent builds in isolation      Maintained and developed MySQL triggers, stored procedures, stored functions, events, and indexes used in large scale replicated environment      Migrated message queue applications from ActiveMQ using the STOMP protocol to RabbitMQ using the AMQP protocol      Developed a Python application for the distribution Tableau reports      Implemented PHPUnit and Codeception testing frameworks      LEAD DEVELOPER EZYIELD 2012 to 2013      Maintained legacy PHP application      Implemented features in a Zend Framework 1 application as part of a rewrite of the legacy system      Developed Zend Framework 2 email reporting system      Performed deployments of all PHP applications      Maintained coding standards using PHPMD and PHPCS      Integrated Composer dependency manager into the development and deployment workflow      Created repeatable processes using ANT build tool      Implemented real-time notification system (prototypes written in PHP using long-polling & short-polling, and using websockets with NodeJS & Socket.io using a TCP messaging protocol)      Created scheduling system for processing and distribution of Hotel ARI (Availability Rate and Inventory) data      Integrated with travel agencies (online and brick & mortar) using a series of adapters written in Perl      Abstracted systems to be deployed on the JBoss Fuse ESB      Assisted DBA in architecting PostgreSQL Database schemas      Utilized Atlassian products (Jira, Bamboo and Fisheye/Crucible) in Agile Scrum processes      Performed source control management using GIT and Git-flow      SR DEVELOPER AVECTRA 2010 to 2012      Developed new features for a privatized multitenant social

media platform written in the Zend Framework 1    Performed TDD using PHPUnit and DBUnit  
Integrated with third parties for synchronization of member information using SOAP and REST  
services    Developed SSO (Single Sign On) integration with Drupal, and all NetFoum CRM  
applications    Implemented distributed offline processing using the Gearman Job Server    Managed  
and maintained Ubuntu QA servers    Created custom deployment tools    Aided systems  
administrators in debugging of Apache/mod\_php issues on Ubuntu production servers    Architected  
and maintained MySQL database schemas using Doctrine Migrations and hand-written SQL  
Analyzed and indexed SQL queries to improve performance    Performed development of custom  
jQuery plugins and led initiative to migrate to jQuery from the Prototype JS libraries    Document  
indexing using Lucene and Apache Solr    Integrated Apache Shindig for Google Gadget  
Developed a REST API with the ability to handle both JSON and XML    Implemented PayPal  
Express payment system    Utilized Statsd & Graphite, NewRelic, and XDebug to improve  
application performance    Migrated PHP versions from 5.2 to 5.3 and then 5.4 (5.4 upgrade was  
performed on 1099 contract)    Migrated SCM from SVN to GIT and Git-flow using Git-SVN as an  
intermediary    OPEN SOURCE CONTRIBUTIONS AND PET PROJECTS    Composer    ? Added  
pre/post script hooks to the archive command    Git-flow    ? Resolved error with the BASH install  
script    Libircclinet    ? Resolved memory leak    TheMeMusic Player    ? Android application that uses  
the accelerometer to trigger play/pause of music    PanicButton    ? C++ Linux application that listens  
to a USB "Panic" button to execute an arbitrary script    Words With Enemies    ? JavaFX application  
that connects to "Words with Friends" to show you the tiles of your opponents    Education A.S in  
COMPUTER PROGRAMMING SEMINOLE STATE COLLEGE 2012 A.S in WEB PROGRAMMING  
SEMINOLE STATE COLLEGE 2012 Skills OO Design Patterns, OOP, DEVOPS, Kanban (Less  
than 1 year), Scrum, Javascript, MYSQL, Git, PHP Additional Information Skills & Abilities  
Integrate legacy systems with new technologies    Proficiency with multiple programming languages  
and frameworks    Understanding of OOP and OO Design patterns    Scrum, Kanban, TDD, BDD,  
and DevOps Methodologies    \*nix Server Administration
