

Database Administrator Database Administrator Broken Arrow, OK I have several years of IT experience which I believe will prove beneficial even though I am not seeking an IT position. Before my career in IT I acquired exceptional skills in customer service, large-scale cash handling, and other general office tasks through jobs in the financial industry. I took several years away from work to raise two children. Now that my children are older, I am eager to find a fulfilling employment opportunity with a good company where I will enjoy being a long term team member. In previous positions I have always excelled based on eagerness to contribute and exceptional people skills.

Work Experience Database Administrator HireRight - Tulsa, OK June 2008 to December 2011

Worked extensively with large scale enterprise solutions including VLDB - very large database environments. Demonstrated skill in performance tuning and optimization in environments utilizing Clustering, SAN, VMWare and various data replication techniques. Supported a complex strategy to automatically refresh stage environments using custom log shipping and SAN snapshots from several replicated production servers. Implemented various strategies for high availability, fault tolerance and disaster recovery utilizing MS server clustering, hot and warm standby servers and diverse backup strategies for environments ranging from simple to extremely complex. Supported various types of data models, ETL strategies and the design of Analysis Services cube solutions.

Managed servers across multiple NOC's and DR sites. Managed releases according to multiple SOP and change management processes. Responsibilities covered almost 100 SQL Servers and over 1000 databases Database Administrator (Internship) TV Guide - Tulsa, OK February 2008 to June 2008 Installed and configured SQL Server 2000 and 2005.
