

Web Developer Web Developer Web Developer The design and interaction of images has always been important to me. It's the main reason I went into web development and began to learn JavaScript and CSS - to create actionable images in a universal medium. My goals in the coming years are to perfect what I know by practicing functional programming, internalizing how the browser rendering process works and working with virtual reality on the web. Sponsorship required to work in the US Work Experience Web Developer Slack May 2015 to August 2015 Using internal tools, I helped build the front- end for the web client and integrations such as Google Calendar and Email Ingestion. UI Engineer Edmodo July 2014 to April 2015 Using Rendr, Marionette and Backbone I helped create the School Analytics platform as well as the Discover Marketplace. Front-End Developer Mopals October 2013 to June 2014 Leveraging Angular, we made a loyalty points site that allowed users to search local businesses, create polls, use offers and earn rewards. Front-End Developer LDVisionGroup January 2013 to September 2013 I drew, designed and developed the front- end for three e-commerce websites. I also worked on user-funneling and e-mail campaigns. Front- End Developer TRC & Innohub December 2012 to September 2013 At Three Red Cubes (TRC) I helped design and develop Uplette, when we transitioned over to Innohub, I developed Ryerson's MBA site.
