

Lead Software Developer Lead Software Developer Lead Software Developer - Syntaur Austin, TX  
Work Experience Lead Software Developer Syntaur - New Braunfels, TX June 2017 to August 2019  
Syntaur brought me on to rebuild the entire ordering process for several programming languages and customers and to build a PHP/MySQL web application for their employees to manage orders, inventory, and accounts. I rely heavily on my proficiency in JavaScript and Bootstrap to enhance our customer's experience and build new features that are cohesive with the rest of the product. I also served as Syntaur's Server Administrator. Contract UI/UX Developer regAction - Houston, TX August 2014 to February 2017 While in school, I contracted for regAction (approx 25 hrs/week). I worked remotely on a project basis, building new functionality in ColdFusion and updating old modules for regAction by using Bootstrap to make a front end toolkit that I implemented across the modules. This made the UI consistent and increased the development time for new features. Education B.G.S. in Computer Science, Business Administration, and Mass Texas State University - San Marcos, TX June 2014 to August 2019 Skills MYSQL, Javascript, Git, CSS, HTML 5, PHP
