

Senior Solution Engineer Senior Solution Engineer Senior Solution Engineer - Dun & Bradstreet
Cedar Park, TX With nine years of web/software/application design and development under my belt, I have evolved and honed my user-centered aesthetic into an efficient interface building machine focused on delivering enriching, logically intuitive experiences that are tactile and memorable. Not afraid to write a controller or two, though.

Work Experience Senior Solution Engineer Dun & Bradstreet - Austin, TX September 2016 to Present Austin, TX - <https://www.dnb.com> Overview: I am the Senior Front End Engineer on our team. I lead the two other FE resources while we build custom applications for Sales teams, SLA-bound custom applications for customers and third-party customer-facing dashboards.

- Guiding business leaders from idea stage all the way to working application/feature
- Defining user personas/flows/wireframes/prototypes and championing them throughout the dev lifecycle
- Performing user research to keep a pulse on our supported user groups
- Maintaining existing Style Guide while encouraging innovation in our FE approach on our team and across the company
- Data visualizations using a number of different libraries (Chart.js, Chartist, D3, etc.)
- Delivering high quality features on time while managing stakeholder expectations as needed
- Interviewing/vetting potential new team members (wrote our FE technical challenge we give to all FE candidates)

Lead Front End Developer/UX Designer CBANC Network - Austin, TX May 2014 to September 2016 Austin, TX - www.cbancnetwork.com Overview: During my time at CBANC, my Front End team increased member engagement across the application by 100% using a VDOM-based UI utilizing atomic JavaScript-based UI components and user-centered design principles.

- UI/UX design/prototyping, style guide generation and enforcement
- Art direction for Belgrade, Serbia design team and 3rd party contractors
- MV* framework application development using Mercury.js/Handlebars.js
- Writing server controllers to make API calls, organize results into useable view models to be passed to views
- Writing browser controllers to handle browser events, update models or show user feedback based on actions
- Writing Handlebars.js then Mercury.js/VDOM-based views driven by view models that integrate atomic UI components
- SASS-based styles/style guide
- UX research (personas, user testing, user interviews, case studies), recommendations and implementation
- Managing feature releases,

updating product managers on progress/roadblocks Lead Front End Developer Clarity Ventures - Austin, TX April 2013 to April 2014 Austin, TX - www.clarity-ventures.com Overview: As Lead Front End Developer and client-facing consultant at Clarity, I worked with more than 30 clients to deliver sites and apps of all creed and color through requirements gathering, expectation management, hands-on development and, finally, launch day (and support after launch)! ? Meeting with clients on a regular basis to gather requirements, offer best path forward, manage expectations, gather milestone consensus ? Leading clients through mock to prototype to approved design lifecycle ? Implementing design to specifications in one of three different frameworks: DNN, WordPress or native development ? Working with many different types of clients to create many different experiences, including: ? National women's empowerment group social network ? 3D-printing marketplace based on uploading 3D design schematics and allowing users to download/trade/purchase ? Texas Dental Association membership site ? Five different Texas Real Estate development companies ? Custom hydraulic component manufacturers product catalog/e-commerce site ? Shree Swaminarayan Hindu Temple catalog of sacred texts and audio recordings Lead Web Developer Pervasive Software - Austin, TX April 2010 to April 2013 Austin, TX - <http://www.actian.com/> Overview: As Lead Web Developer, I designed, implemented and maintained the seven marketing sites for each vertical in the data integration software umbrella of then Pervasive. I also was lead designer on Pervasive Galaxy, the online marketplace for data integration components and lead the Front End team in staying on the cutting edge of Front End practices. ? Gathering requirements from stakeholders, managing expectations through dev lifecycle ? Implementing new features/aesthetics ? Creating user-friendly marketplace including product browse/view/create/cart/checkout experiences utilizing jQuery and AJAX ? Helping develop Pervasive Galaxy Form Builder ? Allowed users to connect to the Pervasive Cloud to create custom forms based on macros associated with Cloud assets ? Users could add up to seven different kinds of fields (e.g. textarea, text input, password field, dropdown select, multi-select radio buttons) ? Macros and form fields submitted via JSON data collection to API Education Bachelor of Arts in Journalism Sam Houston State University - Huntsville, TX 2006 Skills Api (5 years), Engineer

(2 years), Interviewing (2 years), Json (3 years), user research (2 years), Javascript
