

Front- End Developer Front-End Developer Front- End Developer - Zoomph Herndon, VA Work Experience Front- End Developer Zoomph 2014 to Present Developed new features and enhancements to the Zoomph's administrator website which allows users to view analytics of a topic on social media and create visuals containing social media posts of a topic. Zoomph's products are used by marketing strategists, sports teams and event managers to help analyze the trend of a specific topic, analyze the demographics of people discussing a specific topic and create beautiful visual displays for big screens. Developed the competitor wizard tool within the platform. It is a tool that allows the user to easily do comparisons between two companies or personas regarding its trend and sentiment on social media. Refactored a huge part of the application in order to upgrade one of the libraries used which then allowed the platform to perform more complicated searches. Developed the Circles Report which highlighted the most significant attributes of a large group of people. Created visual templates where users can easily create an instance of and apply specific settings to it. The result is a responsive visual that is easy to create and edit.
