

Java Web Application Developer Java Web Application Developer Java Web Application Developer  
- Alphastaff, Inc Miami, FL Work Experience Java Web Application Developer Alphastaff, Inc - Fort  
Lauderdale, FL November 2015 to Present Java Web Application Developer for Alphastaff, job  
functions mostly consist of maintaining existing software code and the development of integration  
projects utilizing Java, APEX, sql server, mysql and API's from PRISMHR, Kronos, Salesforce,  
Humanity and other third party applications Develop projects in Salesforce using APEX language,  
API's from third party software. Periodically do maintenance on the Salesforce Integration projects to  
update and refactor the code to use the latest API version Maintain on premise hosting of PrismHR  
customize application a PEO SAAS company which the software provided and supported is used by  
hundreds of clients. Handle the upgrades to the software include any customizations. Mostly dealing  
with JAVA code related to the software and tomcat deployments of new code or maintenance of the  
code QA Testing, Deployment of the API versions of PrismHR API which are used in integrated  
client solutions and with customize projects. Refactor the code to use the newest version and make  
changes when necessary Kronos middleware application, API integration - maintenance, inserts of  
new clients utilizing Kronos, maintenance and upgrades for the middleware software used. This is a  
time and attendance third party addition which integrates with PrismHR/Alphasource. Maintenance  
of the datafeeds in INFORMER and custom programs in JAVA which split data feed files for  
processing by the Kronos Middleware and cleanup of those files. Kronos API Integration with  
PrismHR, a business solution to the scheduled a file feed system implemented as a scheduled job  
which updates the clients employee information daily via the api's instead of through imported csv  
files Software Developer TRAX USA CORP - Coconut Grove, FL May 2012 to October 2015  
Interface Team programmer working with JAVA, Hibernate, C#, PowerScript, PL-SQL, ORACLE  
database versions 9g, 10g, 11g Developer of web services using Eclipse IDE in JAVA for  
customers using popular frameworks such as Castor, Spring, log4j and Hibernate in Java 1.6 and  
1.7 for different subversions Developed many web service layer API's to enter and manipulate data  
in XML format using XSL for any middleware or interfaces the customer will be developing to use  
these web services. The web services are deployed using Apache Tomcat with WAR builds done

using Apache Ant. The back end mapping was done using the Hibernate framework   Fix any issues found related to the customer problems found with the interfaces or application   Maintain and Migrate older interfaces from C# .net Frameworks to JAVA   Technical support for customers when the implementation of interfaces is needed, traveling onsite to customer locations to implement, setup, design and test the interfaces they requested   Handling of customer requests for modifications of interfaces and any findings of bugs or incorrect business logic in a timely and organized structure via a logging system for these requests   Remote technical support in debugging system issues, discussions of specs, showcases on the use of interfaces and web services   Education B.S. of Engineering in Computer Engineering Florida International University Skills Java J2Ee, Hibernate, Java, Spring, JSP, Javascript Additional Information   Significant experience in JAVA development and widely used frameworks   Solid skills in web service development from specifications to deployment for use in production environments   Expertise in the full development life cycle, specifications, design, prototyping, implementation, testing and maintenance of software systems   Well versed in database analysis, modeling, programming and design   TECHNICAL SKILLS   Languages: JAVA, APEX, C#, XML, XSL, Powerscript, PL/SQL   Frameworks: .Net 3.5, 4.0; JAVA 1.6, 1.7,1.8 Hibernate, Castor, Spring, log4j, JDBC, JUnit   Web Services: SOAP/REST, SOA, Apache Axis, Axis 2   Methodologies & Modeling Tools: OOP, UML, RAD   Back End: IIS, SQL Server, Oracle Server, MySQL   IDE & Development Tools: Eclipse, MS Visual Studios, PowerBuilder, Oracle SQL Developer, SQL Server Management Studio, SQLYog, TortoiseSVN, Orcad, Matlab, Simulink, Netbeans, AutoCAD, Salesforce Development Module   Applications: Kronos, Salesforce
