EV owners can enter their desired destination, which makes an HTTP GET Request to a third-party API and plots a route to that destination. A second third-party API is used to populate the map/route with charging stations. EV owners can generate a GeoJSON circle around their location that shows all of the stations that can be reached based on the max range of their vehicle's make/model, which can be selected using options from a built-in database. + Work History Legal Assistant Robertson, Anschutz, & Schneid September 2017 to April 2019 PL, Boca Raton Handled the Hold/Close/Proceed system processes for foreclosure cases.
