Work Experience Front- End Developer AT&T Mobility - Bothell, WA March 2013 to Present AT&T Mobility is the second largest wireless telecommunications provider in the United States and it currently serves about 116 million customers. With numbers growing in fast, AT&T has been continuously enhancing online user experience. I was part of huge ecommerce development team, which dealt with AT&T's Support division and also redesigning it's contact us website from the scratch.

Responsibilities: Worked closely with designers in understanding the structure of the contact us redesign website. Understood business requirements by closely following up with Business Analyst, Systems Analyst and Product Owner.

Followed Agile methodology in restructuring contact us website. Designed templates in Adobe CQ5 based upon the wireframes and business requirements.

Developed components using JSP for the website in CQ5, this would help change the website on the fly in future. Embedded component content inside HTML and added styles to the webpage using CSS.

Developed responsive styles for mobile version of contact us website. Used core jQuery library functions for logical implementation part of the website. Worked with Analytics team to implement

reporting values for tracking page hits and link clicks using JavaScript. Collaborated with LivePerson Inc. for implementation of third party code packages for live chat functionality.

Environment: HTML, CSS, JavaScript, jQuery, JSP, Adobe CQ5, Oracle WebLogic, Eclipse, SVN, QC

AT&T's website enhancements come at a quick pace in order to make online shopping experience better. Production support team deals in managing business owner's ever-changing requirements. Prime goals for this team were to add new pages to the existing websites and fix any severe functionality issues (if any). Responsibilities: Developed new pages for existing web sites in order to add more features and improve user experience. Worked with business owners to understand the customer demands/inputs and make changes to the website accordingly. Collaborated with Analytics team to capture all the user actions on a web page using JavaScript. Followed waterfall approach in production support team. Fixed production bugs by using various debug tools. Traversed the documents and manipulated the Nodes using DOM Functions. Worked on cross browser compatibility issues pertaining to various browsers. Used modernizr.js, which helped in detecting features of a browser. Used Jira and Quality Center for defect tracking management.

Environment: HTML, CSS, JavaScript, jQuery, JSP, Oracle WebLogic, Eclipse, SVN, Jira Web Developer
