

Project Lead developer Project Lead developer Project Lead developer - JPMC Around 10.5 Years experienced and skilled Technology Lead has a keen ability for software development, aerospace/banking domain knowledge and supervision. Experience in end-to-end implementation of Software Development Life Cycle (Waterfall, Agile and SAFE) including finalization of specifications, design, development and testing Able to understand complex commercial operations and devise effective solutions with full and swift implementation Experience in application back-end development using Core Java, J2EE, Struts, Spring MVC, Spring Boot, Restful webservice Experience in application front-end development using Angular JS 2.0/5.0, React JS, HTML 5, Bootstrap 3, XML/XSLT, CSS 3, JSP, Typescript, Javascript, Node NPM, Flex Extensive experience in developing, deploying, and managing J2EE enterprise projects using like Eclipse, Netbeans, Visual Studio Code, IntelliJ Expertise in developing database SQL /PLSQL queries and optimizing them for performance. Database technologies like Oracle, Microsoft SQL server, MySQL, Sybase Expertise working on Application servers (Oracle WebLogic, JBoss, Apache tomcat) Worked with software control management tools like VSS, GIT and Monitored workload, job performance and capacity planning using VersionOne Expertise in developing unit test cases using JUNIT, Protractor, Mockito Experience in automation testing using QTP, UFT 8+ years of experience leading independent development teams delivering services to globally distributed clients Ability to achieve project goals within project constraints such as scope, time and budget Possess effective communication skills both oral and written Experience in proposals/architect of new/rewrite applications. System study and analysis with various production application to optimize business process Experience in close interaction with customers to understand business requirements, propose architectural design, prototype UI designs, and convert them to technical requirements for development Work Experience Project Lead developer JPMC - Jersey City, NJ October 2017 to Present Roles & Responsibilities: Provide solutions mostly involve in programming and architectural work Setup new Environment (Angular JS, Maven build, Spring MVC, Enterprise JBoss server, Build and Deploy) Ensure quality and timeliness of implementation of activities related to design, build and implementation of work product Participate

in activities related to requirements evaluation, validation of architecture, creation and review of design      Involve in unit testing and integration testing of the application.      Develop web services to cater various migrated functionalities and build using maven      Implement complex business logic using efficient programming techniques and design patterns      Assign and review tasks for work product implementation with the objective of ensuring the highest level of service offerings to client in own technology domain within the guidelines, policies      Performs high and low level design, provides pseudo codes, implements prototype and does design reviews in order to deliver design documents as per customer requirements      Guide the team in developing optimized high quality code deliverable, perform code deliverable reviews & unit test plan reviews, conduct independent testing and get sign off from customers      Review the production issue analysis and fixes, interface with customer to clarify issues in order to ensure issue fixes in timely manner and with minimal production impact      Achievements: Multiple appreciations from client for technical solutions provided      Technologies: Core Java, Spring MVC, Web Services (REST), Testing, JSON, Oracle 11g, Sybase, Apache Tomcat, Angular JS (Node JS), React JS, PL/SQL, Oracle, Agile, JIRA

Lead developer / Onsite coordinator Boeing - Long Beach, CA January 2016 to September 2017

Roles & Responsibilities:      Team handling and provide solutions to team members and mostly involve in programming and architectural work      Setup new Environment (Angular JS, Maven build, Spring MVC, Enterprise JBoss server, Build and Deploy)      Ensure quality and timeliness of implementation of activities related to design, build and implementation of work product      Participate in activities related to requirements evaluation, validation of architecture, creation and review of design      Involve in unit testing and integration testing of the application.      Design database and create tables, write SQL Queries and stored procedures as per the requirements      Develop web services to cater various migrated functionalities and build using maven      Implement complex business logic using efficient programming techniques and design patterns      Participate in requirement elicitation process defined in the project management plan to identify gaps/issues (both functional and non-functional) in order to come up with a comprehensive requirement document      Assign and review tasks for work product implementation with the objective of ensuring the highest

level of service offerings to client in own technology domain within the guidelines, policies

Performs high and low level design, provides pseudo codes, implements prototype and does design reviews in order to deliver design documents as per customer requirements Guide the team in developing optimized high quality code deliverable, perform code deliverable reviews & unit test plan reviews, conduct independent testing and get sign off from customers Review the production issue analysis and fixes, interface with customer to clarify issues in order to ensure issue fixes in timely manner and with minimal production impact Achievements: Multiple appreciations from client for technical solutions provided Appreciation for providing estimations/schedule for application rewrite Technologies: Core Java, Spring Core, Web Services (REST), Testing, XML, JSON, Oracle 11g, JBoss Server, Angular JS (Node JS), PL/SQL, Oracle, Agile, VersionOne Lead developer / Onsite coordinator Boeing April 2013 to December 2015 Roles & Responsibilities:

Team handling and provide solutions to team members and mostly involve in programming and architectural work Build HTML UI with backend core java and oracle database Build source code using ANT and weblogic server deployment Implement complex business logic using efficient programming techniques and design patterns Ensure quality and timeliness of implementation of activities related to design, build and implementation of work product Involve in unit testing and integration testing of the application. Design database and create tables, write SQL Queries and stored procedures as per the requirements Participate in requirement elicitation process defined in the project management plan to identify gaps/issues (both functional and non-functional) in order to come up with a comprehensive requirement document Provides pseudo codes, implements prototype and does design reviews in order to deliver design documents as per customer requirements Guide the team in developing optimized high quality code deliverable, perform code deliverable reviews & unit test plan reviews, conduct independent testing and get sign off from customers Production support Achievements: Power programmer award Technologies: Core Java, Testing, XML, Oracle 10, Weblogic Server, POJO, PL/SQL, Oracle, Waterfall model, VSS Java developer Boeing - Chennai, Tamil Nadu January 2009 to March 2013 Roles & Responsibilities: Individual contributor for complete project development Build UI with

Flex and backend with Java and Oracle database      Implement complex business logic using efficient programming techniques and design patterns      Involve in unit testing and integration testing of the application.      Design database and create tables, write SQL Queries and stored procedures as per the requirements      Get the business requirements and convert to detail technical design document      Provides pseudo codes, implements prototype and does design reviews in order to Deliver design documents as per customer      Technologies:      Adobe Flex, Core Java, Testing, XML, Oracle 10, Weblogic Server, POJO, PL/SQL, Oracle, Waterfall model, VSS Education B.E (Hons.) in Electrical & Electronics Engineering Birla Institute of Technology & Science August 2004 to June 2008 Skills Database, Oracle, Sql, Sybase, Qtp, Uft, Eclipse, J2ee, Java, Spring, Java me, Jboss, Jsp, Struts, Visual studio, Html, Javascript, Bootstrap, Typescript, Xml
