

ColdFusion Developer ColdFusion Developer ColdFusion Developer Omaha, NE Work Experience
ColdFusion Developer Corporate Three Design October 2018 to March 2019 As a ColdFusion Developer I was responsible with maintaining over 100 websites that ran on a custom made Content Management System. My main responsibilities were to update and perform minor tweaks to existing websites housed on the Content Management System along with providing new working solutions for increased productivity and provided direction for new iterations of the current Content Management System along with onboarding new customers into the Content Management System. Before I parted ways with ColdFusion I had begun working on creating a new Content Management System that would be a complete overhaul of the current Content Management System and place it on Spring 5 and use an Angular Front end. Freelance Software Developer July 2012 to October 2018 As a Developer for hire I have filled many different roles in several different projects where every client had different needs and different expectations, which in turn required different tools, languages, and deadlines to be met. I have taken the liberty to break down these years of experience into modules based on a common language that will better explain what I did.

WordPress Development OnTheWeb.design Tools Used: HTML, CSS, JavaScript, PHP, WordPress, Amazon Web Services Content Management System for Ikagai Technologies Platform Added Business logic to OnTheWeb.design to add to Owners ability to market products and services Created ways to fast track design and implementation for additional clients that sign up for website creation services DroneCity Classic Tools Used: HTML, CSS, JavaScript, PHP, WordPress, Amazon Web Services Landing site for Omaha drone racing Olympics competitions Built with a custom ticket sales form Added Client ability to add events to a calendar and YouTube video uploader TechRunWay Tools Used: HTML, CSS, JavaScript, PHP, WordPress, Amazon Web Services Project with the intended purpose of helping newly graduated STEM students to create a profile and search for employment from participating businesses for Colleges such as University Of Nebraska, Creighton, and Bellevue University Added ability for Businesses to create jobs within a job board Made job board searchable based on skills needed, date posted, and Angular & Java Back end Development Rebuild Together Omaha Tools Used: HTML, CSS,
