

Software Developer Software Developer Boston, MA Authorized to work in the US for any employer

Work Experience Software Developer CareDash - Cambridge, MA May 2017 to Present Developed features for main Ruby on Rails application that handles requests for CareDash website

Converted Rails static assets build tool from Sprockets to Webpack. This increased modularity and reusability of the application s JavaScript, as well as decreased the page load time by splitting the JavaScript into page-specific modules, decreasing the amount of resources downloaded

Implemented detailed impressions and click tracking for the revenue-generating sponsored search listings system through Google Analytics together with its Enhanced Ecommerce plugin

Oversaw upgrade from Rails major version 4 to major version 5 in order to take advantage of new features and ensure continued framework support

Overhauled automated tests in Rails application. Automated generation of test stubs for external application requests with vcr and webmock libraries, significantly reducing test writing time

Streamlined user account portal image uploading, utilizing AWS services (Lambda, CloudFront, S3) in order to cut image upload times in half

Assisted in converting CareDash s search application from Apache Solr to Elasticsearch, updating and re-writing data queries into the Elasticsearch format

Designed and built greenfield version of CareDash s Sponsored Listings feature for selecting Sponsored Provider and Facility listings in search results

Improved main application s Docker-based build process in order to decrease application build time and take advantage of newer best practices

Education Coding School in Software Developer App Academy - New York, NY December 2016 to March 2017 Bachelor's in Microbiology University of Vermont - Burlington, VT August 2011 to January 2016 Study Abroad in Japanese Language Nanzan University - Boston, MA June 2015 to December 2015

Skills Javascript, HTML 5, CSS, Git, React, Redux, Docker, AWS Lambda, AWS S3, AWS CloudFront, Ruby on Rails, Ruby, Ansible, PostgreSQL, Python, Elasticsearch, jQuery, Webpack
