

Freelance Web Developer Freelance Web Developer WordPress Developer, WordPress Theme Development, Plugin Development Denver, CO I am a LAMP stack web designer and developer with almost fifteen years of experience. I am extremely experienced in both front-end and back-end WordPress development and UI/UX web design. My primary tools are PHP, HTML, SASS, jQuery, Bootstrap, and Roots/Sage. I have built everything from personal websites to high-profile business websites, but I find my greatest value for clients and employers is my ability to single-handedly take on a project from the concept stage to completion. This is particularly valuable for early stage/pre-funding startups, where building a full development team can often be difficult given budgetary constraints. My greatest value is that I m a generalist with an extremely broad set of skills and experiences; I ve done everything for clients from brand concepts, wireframing, analytics/tag manager, a/b testing and bringing ideas into fully functioning web applications. Authorized to work in the US for any employer
