

Web Developer Web Developer Full Stack Web Developer Boston, MA A full stack web developer doing front end in JS and Razor/CSS and business logic in .NET for a reporting tool at Vermont Information Processing. I started this position in October of 2018, and have since taken ownership of the project's UI and front end logic. I learned JavaScript programming in 2018 from a boot camp, and soon afterwards picked up C# and SQL on my own time. I aim to pick up python next. I have worked an assortment of positions in my career. I solved client IT problems for four years as a team lead for the University of Vermont's Techteam while earning bachelors degrees in wildlife biology and psychology. Since graduation I have tracked tortoises in the Mojave desert, taught curious learners of all ages at an outdoor education center in Bethlehem, New York, and researched raccoons around Burlington's urban landscape. I enjoyed the natural resources field but after making the jump to technology my professional life has never been better. Authorized to work in the US for any employer

Work Experience

Web Developer Vermont Information Processing - Colchester, VT October 2018 to Present -Maintain and extend the front end, business logic, and data access layers of a production reporting tool using C#, jQuery, Ajax, SQL and other technologies. -Successful restructure of css architecture and major UI elements. -Expanded an underused team wiki that is now being used by the whole team for project knowledge sharing.

Web Developer Green Up Vermont - Burlington, VT June 2018 to August 2018 While at the Burlington Code Academy, I got in contact with Green Up Vermont to ask about their needs. In under a month, I assembled a volunteer team of classmates and used the agile process to develop a web app to their specifications. The web app is expected to go live and be public facing by the end of the month.
