

Database Administrator / Database Developer Database Administrator / Database Developer
Database Administrator / Database Developer - Dominion Diagnostics, LLC Providence, RI
Available for contact between 9:00 AM and 9:00 PM. Work Experience Database Administrator /
Database Developer Dominion Diagnostics, LLC - North Kingstown, RI April 2019 to Present
Manage four different database environments: MS SQL Server (ver. 2004-2017), IBM DB2, Oracle
11g, MySQL Responsible for maintaining all ETL jobs, including crontab jobs, SSIS packages, and
flat file imports/exports Configure replication across all environments (Change Data Capture, log
shipping, and snapshot replication) Act as an in-house SQL syntax expert and query optimizer
Create/maintain stored procedures to support our in-house developers Developed a 1:1 test
environment using ETL and replication Analyze index performance and script routine maintenance
according to industry standards Tune production data lakes and warehouses for optimal report
performance Analyze data growth trends to plan for future capacity needs Ensure zero customer
reporting downtime using triggers and automated alerts On call 24/7 for production outages and
turnovers Team lead on designing migration of MySQL servers to MS SQL servers Database
Administrator Teknor Apex Company - Pawtucket, RI December 2016 to March 2019 Reworked
entire SQL Server environment to be within industry standards: scripted backup routine, scheduled
maintenance, VLF reduction, etc. Created a High Availability solution with production databases
using replication and log shipping (for older instances of SQL Server) Set up automatic
performance alerts (via email) in order to prevent major issues On call 24/7 for production outage
needs and rollouts Primarily responsible for query performance and tuning, isolating bottlenecks
and creating keys and indexes to increase performance Secondary source of contact for
Sysadmin issues, like server performance and bottlenecks Provided recommendations for future
business needs by suggesting CPU and I/O solutions and potential licensing needs, mainly with
Microsoft products Worked with developers to identify specific needs for schema design and
proper infrastructure implementation Act as an on-site SQL syntax expert for the business,
providing help and fixing scripts daily Daily monitoring of day-to-day business databases to ensure
smooth productivity Perform monthly health checks on a per-server basis, including backup

testing, data integrity checks, duplication reduction, index defragmentation, etc. Strong team player with great communication skills, able to work independently Responsible for creating DBA documentation, including a disaster recovery plan Senior Database Specialist CVS Health September 2015 to November 2016 Leadership role, department ambassador to main company Responsible for maintaining SQL server and application health (Updates, security standards, etc.) Managed a small team of two, allocating resources to ensure project completion Primary DBA for the Rollout Operations Center during the Target Transition project (over 1600 sites) Optimized existing legacy VB6 scripts to provide maximum efficiency of automated reporting Analyzed risks and benefits of newest database languages to improve legacy system, including providing budget reports and presentations for senior managers to review Created data trending reports for senior VP members of CVS to improve project success rate Audited database information, including data validation and normalization Converted entire department from Windows XP to Windows 7 via software patching and VM testing Migrated department from SQL Server 2008 to SQL Server 2012 Database Specialist CVS Health May 2014 to September 2015 Provided primary support to MySQL databases through a custom front-end application (Roll2000) Designed schemas for new databases for upcoming projects Created custom scripts to generate new tables Analyzed data inconsistency errors and remedied them quickly Developed custom Excel reports to reflect project information using MySQL based on specific requests Used a combination of VB6 and VBA to create automation scripts Served as a co-Project Manager for minor technical projects Responsible for making documentation for various tools and programs Acted as a technical ambassador between project personnel and other resources Technical Support Consultant CVS Health June 2013 to May 2014 Served as third level tech support for CVS Health (as a contractor through Swoon Technologies) Became team leader of two projects within two months of contract Performed management duties such as designating break times and coworkers' shifts Acted as a liaison between Project Managers and team Ensured that the project was rolled out quickly and efficiently Acted as a preliminary SQL DBA for a user base of over 50 employees Consumer Relations Representative Kaz USA Inc - Southborough, MA June 2012 to June 2013 Provided

technical information for a variety of units Diagnosed issues, recorded information, and provided solutions within 3 minutes Processed orders and warranties using an Oracle database Utilized the ability to work in an extremely fast-paced environment Education Management - Information Systems Bridgewater State University Present Information Systems Management in Information Systems Bristol Community College Computer Science/Information Systems University of Massachusetts - Dartmouth - Dartmouth, MA Skills SQL SERVER, SQL, ETL, MONGODB, C++, VB.NET, VBA, VB6, JAVA, DATA WAREHOUSING, DBA, Oracle Db, Sql Db, MYSQL, Ssis, Sql Database
