Work Experience Front End-Angular Developer Macy's - Atlanta, GA March 2018 to Present

Developed RTO @ POS (point of sale system) used by Macy's chain of department stores for generating real-time offers. RTO @ POS application enables to generate exclusive offers which include electronic tags or chips as well as barcodes for targeted customers. The objective is to connect with every customer and apply big data (RTDM) to do so, hence It's perfect for large stores with a high footfall, like Macy's. The main goal is to offer more localized, personalized and smarter retail customer experience across all channels and analyze a large number of different data points, such as out-of-stock rates, price promotions, sell-through rates etc. In addition to that, Macy's gathers, and of course analyses, a vast amount of customer data ranging from visit frequencies and sales to style preferences and online & offline personal motivations. And use this data to create a personalized customer experience including customized incentives at checkout. Responsibilities:

Created and Estimated efforts for software change requests or enhancements and thus achieved 25% annual reduction in setup/ modification time.
