Additional Information PROJECT HISTORY In the Initial Learning Program, got acquainted to the data warehousing ETL tech stack. Developed SQL scripts to enhance customer events data by introducing an attribute for called the customer category. Performed end-to-end software development task on yearlong Joint Business Partnership project, which is to integrate feeds from multiple airlines and apply merger rules. My responsibilities include developing scripts to consume new inbound data files, writing SQLs according to the merger business requirements and integrate them with existing data models and producing new Business Objects dashboards for insights. Coordinated on a yearlong project at overseas client location in British Airways. My responsibilities include gathering business requirements, triaging them to offshore team of 5 people, and developing well tested, performant data warehouse jobs. Learned a lot of team building, communication in addition to technology and problem solving. As a logical next step, to make use of the business and platform knowledge moved to the operations for data and integrity project within

the warehouse, ensuring daily batch jobs completed flawlessly and any incidents turned around in a timely manner.
