

Software/Web Developer Software/Web Developer Software/Web Developer Work Experience

Software/Web Developer HRA Finance Department - New York, NY July 2015 to December 2018

New York ? Designed industry standard software and web applications for NYC HRA Finance Department using ASP.NET, C#, SQL Server and Javascript. ? Collected, organized and transported thousands of client files using MS SQL tables and Stored Procedures, both efficiently and securely. ? Revamped and upgraded the security features of the company's current live Finance.net homepage to better secure data for its 14,000 employees. ? Developed a record-keeping application that stores users identities and respective data, while allowing various editing techniques to change user data if need be, through C#, ASP.NET, MySQL, CSS/HTML. ? Collaborated with other engineers in the project development processes, and used structural design and analysis to determine proper steps towards infrastructure integrity. ? Assisted in transitioning old and live .NET projects to MVC 5.

Data Entry Clerk Real Estate Education Center - New York, NY May 2014 to October 2014

New York ? Organized and compiled real estate data into company database efficiently and accurately using Microsoft Office services (primarily Excel). ? Verified customer information and maintained data confidentiality.

Projects February 2019 - May 2019

"Network Security Backend Simulation" ? Worked alongside 3 other teammates to create a simulated backend system with its own security protocols to protect against different network attacks such as SQL-Injection, DOS, Buffer Overflow, DDOS and more. ? Successfully implemented SQL Injection protection for the backend system/database, using Javascript, Express JS, Node JS, and MySQL for the database.

"Python Todo-Task" January 2019 - May 2019 ? Created a simple to-do application built in Python and Flask, which stores data in noSQL format, in JSON files locally. ? Allows users to create and login into their accounts, to create, update, delete or edit existing personal tasks.

"Data handling with ASP.NET Web Forms and C#" January 2017 - June 2017 ? Developed an extensive phonebook application that allowed users to create secure personalized accounts, where they can manage their contacts in various ways. ? Application was built on ASP.NET WebForms using C#, CSS/HTML, with stored procedure SQL server querying.
