

Business Intelligence Database Administrator Business Intelligence Database Administrator
Business Intelligence Database Administrator - American Family Insurance Waterloo, WI Work
Experience Business Intelligence Database Administrator American Family Insurance - Madison, WI
June 2014 to Present . In my current role we are tasked with implementing mission critical custom
applications into the data warehouse and provide leadership into the logical and physical design of
these custom applications. I also serve as not only the database administrator on these projects, but
also as the point person that manages the various relationships with various teams to successful
implement these objectives throughout the SDLC. In this role, we support infrastructure and
development teams along with end users and business contacts. A highlight of my career thus far
is the creation of a writeback environment in our Greenplum environment that allows data scientists
and data analysts to writeback to the production environment. In this, they are able to bring their
own data and join it to data at rest in the production warehouse. I have created a tool for these
people to perform advanced analytics on the fly on production data. Examples of things being done
in this environment include geospatial analytics, text analytics, decision trees and time series
analysis. This is my vision of data warehouses in the future, not the old reliable canned reporting,
but real-time, decision quality analytics that are produced in an agile atmosphere. Education Master
of Library and Information Science in Library and Information Science University of Wisconsin -
Milwaukee, WI May 2017 Bachelor of Science in Information Science and Technology University of
Wisconsin - Milwaukee, WI May 2014 Bachelor of Arts in History University of Wisconsin -
Whitewater, WI August 2008 Skills databases (Less than 1 year), HTML (Less than 1 year),
