Work Experience

Engagement Manager, Computing & Intelligence United States Air Force June 2016 to Present

Cyber Plans and Programs) 6/2016 to Present Responsible for leading a team of five cyber planning and operations professionals to deliver IT support and solutions for 5,200 personnel across four geographic locations and two military branches. Accountable officer responsible for delivering all related IT projects, including funding acquisition, delivering key objectives on time, and personnel management. Major Accomplishments: In partnership with an engineering team, led the migration to voice over IP (VoIP). The elimination of copper lines is anticipated to save approximately \$1.5M annually. Delivered regular briefings to senior officers regarding active threats and engagement plans to address them. Recently acquired an additional \$290K due to effectively communicating the threat, anticipated consequences, and sound action plans.

Co-leading a cross-functional team of engineers, computer programmers, and pilots to vastly improve the size and effectiveness of pilot training airspace. The new training area will make pilots' combat skills more effective by enabling them to have unimpeded communication in mountainous terrain. Delivered highly complex surveys on twelve (12) U.S. military locations to ensure adherence to physical security standards. Responsible for delivering solutions to address both physical and technical deficiencies to safeguard personnel, technology, and physical assets.

IT Project Manager Cyber Operations and Maintenance October 2015 to June 2016 Led 77 professionals with expertise in radar, radio, supply, heating, ventilation and air conditioning, and

data support to assist in the training of the battle management professionals. Managed and maintained assets worth \$72 million and executes a budget of \$1.6 million. Speaks on behalf of 77 personnel at executive meetings. Speak to issues, current projects and any pertinent updates. Discussions prime coworkers for success and allowed the execution of 3,000 missions, 97,000 syllabus hours and the graduation of 207 battle management students. Budget the opportunities for technicians to attend classes to refresh technical expertise and grow professionally. Investing in the technicians Assembled team to overhaul remote radio site for Luke Air Force Base's air control capabilities. The rewiring of four radios and optimizing our facility grounding resulting in increased radio clarity by 25%. Procured \$25,000 in upgraded parts and provided technical support that enabled NATO allies the opportunity to perform ground to air exercises. Created program to mitigate vulnerabilities present on \$56 million dollar network that included 48 network devices. IT Project Coordinator July 2012 to October 2015 Directed management team that supported \$24 million network operations and information assurance policies. Ensured compliance with all regulations, policy and procedure as well as cyber security measures for network users. Audited offices, conducted site visits and inspected network devices. Identified compliance issues and carried out corrective measures that prepared the installation for the upcoming Defense Information Systems Agency (DISA) inspection. Led a cross-functional project team that prepared the installation's networks and information security programs for the DISA inspection process. Eliminated over 155,000 network vulnerabilities. Recognized for best practice in network security methods and procedures. Facilitated quarterly training sessions for coworkers and briefed senior executives about cyber threats, information security updates and risk mitigation measures. Provided coworkers and senior executives with information and created buy-in for the projects and initiatives put in place. Scheduled, planned and supervised an operating system (OS) upgrade for 5,600 desktops and laptops. The upgrade ensured healthy machines and hardened the network.
