Senior Software Developer Senior Software Developer Senior Software Developer - Advantage Software Charlotte, NC Being a creative problem solver has always been a part of my life. When I was younger, I was always building my most innovative buildings with Lego cities - no building was created equal. Now, I build interactive experiences for the digital world, from the ground up. First, I laid the foundation with wireframes then I create the design, and finally the front- end code. I am passionate about building and creating noteworthy digital experiences no matter what industry it is.

Work Experience Senior Software Developer Advantage Software February 2018 to Present Created a new user experience for the Advantage web application ? Provided UX accessibility and usability expertise on multiple applications within the Advantage product ? Created and maintained user flows for all Advantage's Applications ? Researched and created new designs and introduced new functionality to Advantage's applications. ? Concept and design new features for our applications and document them for hand-off to developers ? Created and maintained architecture documents for all applications updated in Advantage ? Refactored old UI into a lean modern design for better performance ? Maintained all CSS/LESS/SASS stylesheets and created a style guide documenting it. ? Worked with developers to fix any roadblocks they possibly have and communicate them to management. ? Design and Develop our new expense report application (Html, CSS, JS, Angular 7-8, Sass, npm, command line) ?
