Front End Developer Front End Developer Front End Developer - Paysign Las Vegas, NV Work Experience Front End Developer Paysign - Henderson, NV May 2018 to Present Node.js Paysign (PAYS) is a publicly listed financial technology company that offers prepaid card solution to several different enterprise clients. As Building/Consuming RESTful Front End Developer, I work closely with the Software Architect, APIs Software Engineer, and Chief Technology Officer to plan, design, Vanilla JS / Typescript implement, and finally maintain several different value added and Agile revenue earning systems. All single page applications, we used Angular for most solutions but used Ionic 4 for the mobile app. In the scope of Git work, I also had the opportunity to help design RESTful servers for Responsive Web Development admin style interfaces using Node.js and Nest.js that managed the consumer facing products. This leveraged much of my skills in ES6+ Typescript and the code paradigms present in Angular. In addition, I am Single Page Applications responsible for setting up automated tests for products using Karma and Jasmine. Production Art Capable The Siegel Group - Las Vegas, NV June 2017 to May 2018 LANGUAGES   The Siegel Group is a real estate holding and budget suites company that Spoken: English, Bulgarian specializes in the "Siegel Suites" brand of low cost housing. As Web Producer, I manage all forward facing and internal web applications. I Code: HTML, CSS, Javascript, overhauled dated websites using responsive web design techniques and Typescript, PHP, SQL, Python implemented customized WordPress sites to reduce maintenance, improve security, and ensure up to date data for many properties across state lines. I also maintain existing legacy code as necessary. I am consulted for user experience for digital marketing and work together References   with stakeholders and designers to deliver a product as it relates to web Will be given upon request that compels the demographic to easily follow up with sales. I also run AdWords PPC campaigns, report web analytics, and research new tools and technologies as it relates to company needs. Designer/ Developer FarHeap Solutions Inc - Las Vegas, NV September 2016 to June 2017 FarHeap Solutions is a tech holding company for several brands relating to print services and technology, such as Overnight Prints, RentAPress, and OpenSoft. I was brought on as a Wordpress Developer to create, manage, and advise in future deployment of Wordpress installations. I worked with brand

managers and stakeholders to develop solutions to design, usability, and functionality problems using PHP, JQuery, data management, and API integration. I had significant experience designing and implementing themes and plugins in addition to deploying and customizing themes. Associate Software Insuremonkey Inc - Henderson, NV June 2014 to June 2016 Insuremonkey is a health services tech startup that helps people obtain health insurance. Originally an internship, my duties on major inhouse and client-oriented projects included HTML, CSS, and Javascript coding, as well as front end design and content editing. This was also accompanied by Python development for the web app that dealt with checkout processes and data with HIPAA regulations. Regular code releases were also done within a team structure.
