Database Administrator,Oracle , SQL Server Database Administrator,Oracle , SQL Server Database Administrator,Oracle , SQL Server - DVG Interactive Mendham, NJ   Knowledge of Linux/UNIX/HP/Solaris operating systems   Knowledge of Oracle and SQL application software installation and configuration   10+years experience in healthcare Electronic Medical Record (Epic, Cerner, All-script and McKesson)   implementation consultant and End User Support.   with Oracle Database/SQL Administration and application administration.   General Oracle Database Administration.   Experience in Setting up Always ON   Administration of SQL Server Replication   Experience with Encryption   Knowledge in AWS cloud solutions   Experience in maintaining and supporting database applications and database server   Experience working in UNIX or Linux environment   Experience with database backup, restore and recovery using RMAN   Motivation to receive internal training and mentoring in Database Administration   Knowledge of Oracle Data Guard and RAC, ASM, OEM, HPSM, GOLDEN GATE.   Oracle Streams replication knowledge   Strong working knowledge of Microsoft Office, HL7 interfaces, SDLC, MDI, FSI, Visio   Data Extract, Transformation and Load experience.   Oracle 12c, 11g, 10g & 9i,   SQL Developer, PL/SQL TOAD, SSRS, SSAS Authorized to work in the US for any employer Work Experience Database Administrator,Oracle , SQL Server DVG Interactive - Mendham, NJ March 2018 to Present Responsibilities: Provide DBA 7x24 Support to production teams and perform routine DBA activities for   Oracle/SQL database instances.   Strong experience in mentoring team members and writing documentation.   Great working knowledge installing, patching, maintaining and upgrading all Orac   MS SQL Server software.   Experience in Clustering (Active/Active, Active/Passive).   Experience in Setting up Always ON availability groups.   Experience in Mirroring, Log Shipping and Replication.   Control user privileges and closing production support tickets with client satisfaction   timely manner.   Monitor database activity and file usage, and ensures necessary resources are present.   Determine data to collect and analyzes information as appropriate.   Investigate and resolve technical database issues of significance.   Utilize third party performance tuning tools to analyze and determine d   performances.   Characteristic, informational needs and elements, data flow, storage requirements, data   output and reporting capabilities for

complex databases. Backup/Restore, Troubleshooting databases for performance tuning. Read and understand T-SQL. Designed, building, installing, configuring and supporting Database servers Installed, maintained and patched the MS-SQL software; created, moved, upgraded, and deleted databases. Implemented backup and recovery processes; performed routine maintenance on databases; monitored and tuned databases using Performance Monitor, SQL Server Profiler and Dynamic Management Views (DMV) and Dynamic Management Functions (DMF). Experience in using Resource Governor for resource control. Implemented and maintained security rules and security audits; maintained state of audit readiness; problem resolution. Experienced in using MS SQL Reporting Service (SSRS) and MS SQL Server Analysis Services (SSAS). Deployed and maintained SQL clustering environment Experience using Master Data Management (MDM) for data management, data control, data linage. Monitored database system details within the database, including stored procedures and execution time. Planned and implemented high availability solutions. Experience in installing, configuring and supporting DATAGUARD and GOLDGATE. Performance tuning experience, specializing in database and instance tuning and SQL optimization. Experience with SQL Server 2016/2014/2012/2010 R2/2008 installation, Migration, configuration. Managed 4 node Oracle 11g Real Application Clusters (RAC) databases with ASM Storage. Participated in problem resolution and system enhancements. Capacity analysis of Oracle Databases and the Data warehouse. Analyze database performance, review Oracle performance reports and provide tuning Recommendations. Troubleshoot performance problems and fine-tuning of databases. Documented the database environments and architectures. Provided user management assistance. Documented and maintain standards for database infrastructure, monitoring, maintenance, and security. Review storage growth trends and plan future storage requirements for the databases. Monitored space usage and adjust database as needed. Monitoring Oracle trends for hardware usage and user load using OEM. Monitored backup operations, resolve backup issues, and schedule manual backups as needed. Ensuring SOX compliance and satisfying audit requirements. Core Engineering support, Creating RAC database and

configuration RMAN Backups   Ensuring Database deployment P2P process is successful. Implementing Oracle patch upgrades.   Implementing and Configuring OEM to meet GM Standard. Oracle Database Administrator Boeing - Troy, MI September 2016 to February 2018 Responsibilities: Provide DBA 7x24 Support to production teams and perform routine DBA activities for Oracle/SQL database instances.   Managed 4 node Oracle 11g Real Application Clusters (RAC) databases with ASM Storage.   Participated in problem resolution and system enhancements.   Worked closely with ETL Developers, Application analysts, Database programmers and web developers.   Capacity analysis of Oracle Databases and the Data warehouse.   Analyze database performance, review Oracle performance reports and provide tuning Recommendations.   Troubleshoot performance problems and fine-tuning of databases. Documented the database environments and architectures.   Experience in using Resource Governor for resource control.   Provided user management assistance.   Documented and maintain standards for database infrastructure, monitoring, maintenance, and security.   Review storage growth trends and plan future storage requirements for the databases.   Monitored space usage and adjust database as needed.   Monitored Scheduled backup operations using AUTOSYS, resolve backup issues, and schedule manual backups as needed Remote Technical Support Specialist SupportSpace - Atlanta, GA February 2014 to August 2016 Responsibilities: Provide 7x24 remote GeekSquad level hardware, software Support to best buy customers..   Install, configure, troubleshoot and resolve hardware device issues for the customer   Troubleshoot and resolve customer software issues.   Provide timely, and first call response to customers technical issues.   Provide accurate and updated information on incident assigned to service desk Database Administrator,Oracle , SQL Server Dish Network - Spartanburg, SC February 2012 to January 2014 Responsibilities: Provide DBA 7x24 Support to production teams and perform routine DBA activities for Oracle/SQL database instances.   Designed, building, installing, configuring and supporting Database servers   Installed, maintained and patched the MS-SQL software; created, moved, upgraded, and deleted databases; implemented backup and recovery processes; performed routine maintenance on databases; monitored and tuned databases using Performance Monitor,

SQL Server Profiler and Dynamic Management Views; implemented and maintained security rules and security audits; maintained state of audit readiness; problem resolution.   Deployed and maintained SQL clustering environment   Monitored database system details within the database, including stored procedures and execution time   Monitored, optimize and requested allocation physical data storage for database systems   Planned and coordinated data migration between systems   Experience in using Resource Governor for resource control.   Troubleshoot performance problems and fine-tuning of databases.   Expertise in designing databases and capacity planning.   Experience with rebuilding the indexes and statistics update at regular intervals for better performance.   Designed and implemented comprehensive Backup plan and disaster recovery strategies Implemented.   Develop and document standards and guidelines   Read and understand T-SQL.   Modify existing databases and database management systems or direct programmers and analysts to make changes.   Maintains strong relationships with all lines of business and business units, through customer focused service delivery.   Executes developer' installation scripts to create tables, indexes, stored procedures and load initial data, including upgrades after DBA review and approval.   Assist Senior DBA in maintaining documentation and coding standards, lessons learned, best practices, and quality improvement documentation. Demonstrated experience with Oracle tools including 3rd party integration products Support Engineer Dish Network - Spartanburg, SC July 2010 to January 2012 Responsibilities: create and maintain company system environment(s) with emphasis on uptime, reliability, scalability and performance.   Provided support in areas, but not limited to PC/Server hardware, data networks, telephony, software applications.   First touch resolution, trouble ticket dispatching and resolution follow -up.   Hardware, software, and server support utilizing remote tools to resolve trouble or gather additional information.   Domain user and computer account administration through active directory.   Manage multiple support tools simultaneously.   Perform entry to 1st level support of computer hardware.   Install software, hardware and peripheral components such as monitors, keyboards, printers, network interface cards and disk drives on user's premises. Perform PC Adds/Moves/Changes.   Responsible for learning and mastering system administration duties.

Including, but not limited to, installation, monitoring, backup and recovery and tuning. Provide updates, status, and completion information according to published procedures. Enters and completes problem ticket information via the approved tracking system. Logs all repairs and services performed. Responsible for updating, maintaining and verifying inventory record for all IT hardware and systems for assigned sites according to IT guidelines. National General Insurance - Winston-Salem, NC August 2008 to June 2010 Winston-Salem,NC Aug 2008 to Jun 2010 SoftwareTester 1. Responsibilities: Ensures production and quality standards are met by verifying that the inbound and outbound RA information related to the receiver is correct. Verifies warranty validity and charges related to Customer replacement outbound. Verifies accuracy of information collected by performing a Functional test on digital satellite; viewing information collected, to ensure proper codes were used. Distributed results to supervisor and management. Ensure that all equipment and surrounding areas are neat, clean and well organized. Bring all parts shortages, equipment, procedural and personnel problems to the attention of managements. Keep necessary written or computerized logs and records as requested. Issue out smartcard and ensure all the smartcards issued correspond with daily production goal. Keep all inventory of smartcard used daily. Run a daily report of production goal. Education Bachelor's Skills disaster recovery (2 years), MS SQL Server (3 years), security (4 years), SQL (4 years), SQL Server (3 years)
