ReactJS Developer ReactJS Developer ReactJS Developer - Blue cross blue shield Jacksonville, FL

About6+ years of IT experience asa Front-End UI Developer with exceptional skills in Analysis, Design and Development of high scalable Multi-Tired Web Applications   Experience in developing user experiences of Internet/Intranet applications usingHTML4.0/5, CSS2/3, JavaScript, TypeScript, ES6, jQuery, AJAX, JSON, XHTML, Bootstrap, Node.js, Express meeting W3C standards   Experience in working with CSS preprocessors like LESS and SASS along with JavaScript task runners like Grunt and Gulp   Expertise in developing Single Page Applications (SPA) with MVC Architecture such as AngularJS, Angular 2, ReactJS, Redux, Redux SAGA's   Good Knowledge of State Management in Application Using Redux,Redux forms,RxJs and NgRx   Experience with React.JS and React-Redux app and developed real time applications using React JS Flux architecture for creating user interface, displaying data, keeping the user interface up-to-date when data changes   Experience in creating maintainable and testable software applications using AngularJS, created Multiple & Nested Views, Routing, Controllers, Services, Custom directives and implemented 2-way data binding   Experience in working on Angular 2 orders, Controllers, Filters, Services, Templates, and Events   Developed API driven responsive web applications by integrating Angular 2 with Bootstrap and API's   In depth knowledge HTML5, CSS3, Polymer and Hands-on Angular skills   Extensively implemented ES6 for building an interactivecross-platform web application   Extensive use of Node.js, Express.js, and MongoDB to create server-side applications   Strong experience in working with third party webservices and using AJAX for implementing dynamic webpages where the content can be fetched via API calls, using Restful web services   Perform Web Optimization on websites and web services for improved functionality over Cross Browsers and platforms compatibility issues, responsible for Responsive Web Design and hence worked on different browsers like Safari, Firefox, Google Chrome and Internet Explorer. Debugging applications in different browsers using Firebug, and testing applications using QUnit, Jasmine, and karma, Mocha   Experienced in version control tools GIT, bash, Terminal, SourceTree and SVNand various bug tracking tools like JIRAfor issue tracking and assessment   Experience in using build tools, Gulp, Grunt, NPM, Webpack, Webpack-loaders, REST Web Services for package

management and installation   Experience with full Software Development Life-Cycle (SDLC), Object Oriented Programming and Agile Methodologies Authorized to work in the US for any employer Work Experience ReactJS Developer Blue cross blue shield - Jacksonville, FL March 2018 to Present Roles and Responsibilities: Responsible for developing a Responsive design, pure stand-alone, single page E-commerce application involving CMS driven technology solutions Involved in building pure React-Redux application from scratch which involves stable, Reusable stateless and stateful React components   Developed application with ReactJS for the front-end framework and maintained the unidirectional synchronous data flow of the website using REDUX architecture   Implemented mapStateToProps, mapDispatchToProps for maintaining the interactions between React and Redux by dispatching received actions   Enhanced the dynamic functionality by creating and dispatching Action creators that deploy the actions received from the Reducers that modify the Store State management   Used Redux Saga's to manipulate the state and to implement the Asynchronous API calls which is executed after an action is dispatched before reaching the reducer to co-ordinate and trigger asynchronous actions   Extensive usage of React Emotion for style as a function of state for maintaining the flexibility of CSS-in-JS throughout the application for great developer, performance experience with heavy caching in production   Usage of Adobe Experience Manager (AEM) for dynamically creating HTML templates for identifying the React component from the NODE layer and reusing the same format across the development of the application   Worked on Adobe Scene 7 integration establishing a direct interaction with Adobe Experience Manager (AEM) where the image and video assets are generated with certain presets in the URL's generated by API's   Utilized Google Analytics and Enhanced E-commerce Analytics to track the visitor flow, touch points and interaction analyzing the ecommerce solutions rate of increasing traffic patterns throughoutthe website with the provided tracking code   Implemented the WCAG 2.0 and 2.1 standards of Accessibility and ADA for increasing the front-end compliance providing support to various organizations   Worked with API team for maintaining efficiency in the front-end code with the API's using Swagger UI as a visual documentation for back-end implementation   Involved in using Bootstrap 4.0 and media queries for maintaining the

responsiveness to support mobile, tablet and Desktop view throughout the website   Involved in writing test plan using Shallow,Chai, Mocha and Enzyme to ensure completeness in the unit testing code coverage   Usage of bash, terminal and SourceTree for source control and JIRA for assessing defects and issues tracking system in a timely manner   Environment:HTML, CSS, Emotion, Bootstrap 4.0, JavaScript, ReactJS, Redux, Redux Saga's, ES6, Restful API's, NPM, Webpack, GIT, SourceTree, JIRA, Shallow, Chai, Mocha, Enzyme, AEM UI Developer Delta Airlines - Atlanta, GA July 2017 to January 2018 Roles and Responsibilities: Designed and developed the agent portal by writing modular, secure, well-tested front-end code using framework Angular2 along with HTML5, CSS3, and TypeScript   The portal is made responsive using Bootstrap and media queries to support desktop and tablets   Designed Sitemaps andWireframe to clarify complex interactions   Implemented Restful API from core using Node.js and Express Framework   Used REST client / POSTMAN to check the response of various API's, Swagger UI as a visual documentation for back-end implementation and client-side consumption. Handled various exceptions based on the response   Migrating angular 1, 2 applications to Angular4 features like animations, Pipes and responsible to create new module using Angular4.   Experience with Angular 2 & 4 Directives, Dependency Injection, Services, Routing, pipes, Animations, Forms, AOT, Lazy Loading, RXJS   Developed solutions for adapting content and presentation to mobile devices and browsers   Created TypeScript reusable components and services to consume REST API's using Component based architecture provided by Angular 2   Used Webpack to build TypeScript modules   Implemented HTTP requests using RxJS Observable library to handle multiple values over time   Developed secured credit and fraud check flows for customer verification   Implemented Angular Router to enable navigation from one view to the next as agent performs application tasks   Refactored code to improve its maintenance and extensibility and reduce its complexity   Created a build process for different environments like dev, test and production. Demonstrated knowledge of code reviews, unit and regression testing   Involved in writing test plan using Jasmine and Karma to ensure 100% code coverage   Used GIT for source control and JIRA for tracking purposes   Environment: HTML5, CSS3, SASS, JavaScript, Angular 2, RxJS, Typescript, Agile, Bootstrap,

REST API's, Webpack, TSLint, Jasmine, Karma, NPM, GIT, JIRA, MAC and Visual Studio. React JS Developer Academy Sports & Outdoors - Houston, TX January 2017 to June 2017 Roles and Responsibilities: Implemented various screens for the front end using React.js and used various predefined components from NPM (Node Package Manager) and redux library   Implemented React-Router,React Redux architecture, ES6, web pack and Grunt to turn application into Single Page Application   Participated in using React JS components, Forms, Events, Keys, Router, Animations and Flux concept.   Experience in working with REDUX architecture andREDUX for state management in maintaining the application when the state is updated   Used REDUX Thunk for maintaining the dispatch either if the state is delayed or if the condition is met   Responsible for developing front-end application using React.js and FLUX architecture for internal team's productivity use   Worked with backend engineers to optimize existing API calls to create efficiencies by deprecating unneeded API calls   Worked on integrating jQuery API's, Loopback API's with MVC pattern.   Developed Address book, Order Return, Track order form components using Redux Form   Used ES6, JSXwith react for component development make react look more elegant   Used Babel.js to transpileES6 and JSX into JavaScript   Experience with props and states in react to manage data and used Rally for task tracking and to build user stories   Used Node.js to run Web pack tasks and help build the project   Have used Jenkins for build process and Continuous integration   Tested React components and application using Jasmine and Karma   Used Git for version controlling and regularly pushed the code to GitHub   Environment: HTML, CSS, JavaScript, jQuery, ReactJS, Redux, Flux, NodeJS, Typescript, ES6, NPM, Webpack, GIT, Jasmine, Karma,Protractor UI Developer ETS - Princeton, NJ May 2016 to December 2016 Roles and Responsibilities: Developed the User Interactive web pages using web technologies likeHTML, CSS, JavaScript, Angular JS as per company's standards.   Developed Single Page Application using Angular JSfor different modules including event driven pages   Applied Angular 2 to follow MVC patterns for improving the source code and maintaining track of it   Developed reusable components using Custom Directives in AngularJS   Developed various application functionalities such as search, pagination, filtering using MVVM JavaScript Framework Angular JS

Developed custom Angular JS proxy to send requests to client's APIs, handling authentication and custom headers   Maintained existing UI Applications and upgraded them using HTML5, CSS3, jQuery, AJAX, JavaScript and JSON   Utilized JavaScript framework NodeJS   Used latest ES6 features such as arrow functions and classes toimplement business logic in the application.   Used JavaScript for developing client-side presentation and data validation within the forms   Implemented various Validation Controls for form validation and implemented custom validation controls with JavaScript and jQuery   Developed web application, AJAX Driven user interface, interaction scenarios and AJAX navigation based on analysis, interpretations of requirement and use cases   Involved in writing application level code to interact with Controllers and Web API's, using AJAX, JSON and XML   Used Angular two-way binding and Implemented the search functionality for Internal Application using AngularJS   Used AngularJS multiple in-built directives such as filters, root scope, child scope, modal, template, state   Worked in Service Oriented Architecture the Angular component interacts with the API for the fetching data   Developed form validation with AngularJS $valid, and data validation   Design and development of a proof-of-concept real-time notification system using NodeJS   Used NodeJS as a proxy to interact with Rest services and interacting with Database.   Performed Verification and validation process for the code written by making use of Jasmine and Karma JavaScript testing framework by testing across various scenarios of the applications   Involved in Agile process, Sprint meetings, attended daily standup meetings (Scrum)   Using tools like GIT for version controlling, chrome and Jenkins for deploying the code to different environments   Environment: HTML, HTML5, CSS, Bootstrap, JavaScript, jQuery, AJAX, JSON, AngularJS, NodeJS, MongoDB, Agile, WebStorm Junior Web/UI Developer Advithri Technologies - Hyderabad, Telangana January 2012 to August 2015 Roles and Responsibilities: Developed customer facing software for managing advertisements to grow the business using JavaScript, HTML, CSS   Analyzed, Designed and developed the system to meet the requirements of business users   Involved in writing application level code to interact with APIs, Web Services using AJAX, JSON and XML   Implemented and designed user interface for web-based customer application   Developed data formatted web applications and deploy the script

using Client-side scripting using JavaScript   Implemented presentation tier using HTML, CSS by utilizing the mockups that were created by design team   Designed dynamic client-side JavaScript codes to build web forms and stimulate process for web application, page navigation and form validation   Used AJAX for implementing part of the functionality for Customer Registration, View Customer information modules   Used jQuery to make the HTML, CSS interact with JavaScript functions to add dynamism to the webpage   Produced content pages with CSS3 layout and style markup presentations and used JavaScript methods and properties   Used AJAX and JSON to request data from server and get all the information of warehouse status to be shown on the front-end side   Implemented interaction between frontend and backend using the JSON object   Using complex Object-Oriented concepts in improving the performance of the websites   Worked on Cross-Browser compatibility and fixed the bugs for several browsers   Used CSS to provide table free layout to user interface screen   Environment: HTML, CSS, DHTML, JavaScript, jQuery, AJAX, JSON, XML, MVC. Skills MS VISUAL STUDIO, VISUAL STUDIO, APPLICATION SERVER, Git, HTML
