IT Manager / Programmer IT Manager / Programmer IT Manager / Programmer - Blue Chip Group Saratoga Springs, UT Work Experience IT Manager / Programmer Blue Chip Group December 2018 to Present Blue chip group is a company involved in the food manufacturing and emergency preparedness industries. When I first came to Blue Chip I had thought it would be in a very specific capacity as a SQL developer. After going through the hiring process they decided that with the skills I had to offer I would be more valuable managing the systems, and infrastructure. So on top of my work helping with the database, I have managed the servers, network, phone system, and all end users here at Blue chip. Sql Developer/Interim Food for Health International July 2017 to December 2018 Director of IT   I came into the FFH team in July of 2017. I was hired to fix a good amount of issues that had been created by the previous IT staff. Key among the fixes I was brought on to fix were a shipping Pick Pack system that had not been fully implemented and fix major issues with the databases and speed issues. I was able to get the CASI pick pack system running through fixes to the programming. I also brought the servers and databases up to speed and was able to make serious improvements to the latency and usability of the ERP system. Database Administrator Wilson Electronics June 2014 to July 2018 I began as an intern in the IT department. I worked directly with their DBA maintaining the ERP system. 2 months after interning I was offered a full-time position as a DB Tech and have now taken over as their senior DBA. In my role as Database Administrator I maintain the production databases, handle front-end and back-end code for their manufacturing websites as well as build out new features for all facets of their production and sales departments. Education AS degree in Information Technology Dixie State University
