UI Designer/ Developer

UI Designer/Developer

Your New Frontend Specialist

Chicago, IL

I'm a frontend development manager and web developer that has been delivering websites and applications for over 15 years. With my design background, I have been able to creatively solve a variety of technical problems. Recent positions have allowed me to build, grow and mentor frontend development teams. Helping scope projects, track team tasks and ensure the frontend developers had everything they needed to be successful. Always curious I like to research emerging technologies. Really excited about JS frameworks (ReactJS, Angular and others) and the ways companies are using those to develop their applications.
