Instructional Designer Instructional Designer Software Engineer Bastrop, TX I love programming. I take pride in my work. I care deeply about others. I'm enjoyable to work with. I love sharing what I know and I appreciate every opportunity I get to learn from others.   I am a full-stack engineer that is passionate about writing beautiful code to create beautiful products that consider the user experience. I m always on the lookout for new challenges and enjoy collaborating with team members to come up with creative solutions to problems. I m happy both diving deep into the details and leading a team to create a well-architected product. I have startup experience where I was directly responsible for building and shipping a scalable application -- which included load balanced web servers, replicated databases, data processing, and a custom built message queueing system. I ve been recently utilizing JavaScript across the stack, React on the front-end, and Node on the back-end, and very quickly pick up new technologies. Authorized to work in the US for any employer
