Python Developer Python Developer Python Developer - Designed robust, scalable, secure, and globalized web-based applications Virginia    1-2 years of relevant experience    Web based development experience utilizing Python    LINQ and designing an object-oriented system using Python and SQL Server    Web based development experience with JQuery, Ajax and various JavaScript frameworks is required    Outstanding organizational skills, including self-motivation and the ability to take ownership of a project from start to finish    Ability to work individually or as part of a team    Outstanding communication skills and ability to communicate effectively with internal customers    Previous proven experience working effectively with employees and customers Developed applications using Python and MySQL for database design    Implemented discretization and binning, data wrangling: cleaning, transforming, merging and reshaping data frames Determined optimal business logic implementations, applying best design patterns    Created RESTFUL API's for several of our Intranet applications using open source software    Managed a small team of programmers using a modified version of the agile development Work Experience Python Developer Designed robust, scalable, secure, and globalized web-based applications June 2018 to Present Company Name:  Designed robust, scalable, secure, and globalized web-based applications.    Responsibilities:    Developed Python based API (RESTful Web Service) to track sales and perform sales analysis using Flask, SQLAlchemy and PostgreSQL.    Developed and designed an API (RESTful Web Service) for the company's website.    Developed and designed e-mail marketing campaigns using HTML and CSS.    Maintained customers relationship management databases (MySQL / PostgreSQL)    Developed server-based web traffic statistical analysis tool using Flask, Pandas.    Managed companies' virtual servers at Amazon EC2, S3 Designed a web-based system to improve business intelligence, logistics, manage inventory and sales, and forecast demand.    Used the Python language to develop web-based data retrieval systems    Performed data entry and other clerical work as required for project completion Performed descriptive and multivariate statistical analysis of data using Matlab Junior Software/ Python Developer February 2017 to June 2018 Company Name:    Responsible for programming, developing and documenting interactive Web applications and automation procedures    Creating,

maintaining and updating various Web applications created primarily in Python   The right candidate must have hands on experience with Python, HTML/CSS, JavaScript, jQuery, SQL Server Experience in building multi-tiers applications     Ability to work plan, estimate and deliver autonomously but equally partner with fellow engineers    Proficient in Linux, including scripting and deployment of applications in an enterprise environment    A strong understanding of common web development techniques, e.g. REST, JSON etc     Appreciation of the development of secure scalable systems    Excellent problem-solving skills, in particular a methodical approach to dealing with problems across distributed systems    Strong verbal and written skills required to interact with a global teams and customers. Education Bachelor of Commerce degree in Commerce H.K Commerce College - Gujarat University.
