Role Senior Software Engineer Role Senior Software Engineer Role Senior Software Engineer - Riccione Resources Edison, NJ   Over 10+ years of strong experience working on leading web and database technologies like PHP (pure PHP 4/5, PHP with OOP, PHP with frameworks Symfony 2.X, Laravel), Node Js, React JS SQL(generic SQL, MySQL), JavaScript(generic JS, JQuery, Ajax, cross-domain Ajax and Angular JS), CSS, HTML, HTTP, XML, JSON, . Strong understanding and implementation of MVC framework.   Extensive experience in implementing the AJAX features and efficient UI/DOM development with JQuery, HTML 5, CSS 3, JSON.   Sound understanding of different browser's rendering engines, behaviors and cross browser compatibilities.   Experience with front-end optimization, Firebug, IE Tester, Chrome DOM inspectors, JavaScript debugging techniques, improving website performance using applications like YSlow, PageSpeed etc.   Thorough knowledge of internet concepts, sound understanding of data structures and algorithms.   Experience in programming using OOP's concepts with PHP 5, Python to create complex back-end management systems like e-commerce, social networking tools, content management, communication interfaces.   Experience and knowledge of PHP caching mechanisms like MemCache, real-time data streaming solution using PHP and AJAX like Comet, version control system like Git, SVN etc.   Strong RDBMS skills with excellent knowledge of designing database, normalization, writing complex queries.   Well versed with complete Software Development Life Cycle (SDLC) process and experience working in Agile process which includes Requirements, Designing, Development, Testing, Implementation and Maintenance.   Highly committed to work, success and quality of my work, organized, innovative, have "thinking out of the box" attitude. Ability to work with a sense of urgency in an aggressive, multi-tasking environment and meet deadlines.   Ability to master new technologies and languages very quickly and with ease.   Delivering and implementing project as scheduled and ensuring compliance to quality standards, Maintaining SLA as per defined norm.   Overseeing the smooth implementation and testing as well as provide post-implementation, enhancement and maintenance support to Client Authorized to work in the US for any employer Work Experience Role Senior Software Engineer Riccione Resources - Dallas, TX August 2018 to Present Project Title: Time/Money/Forutne/Time For Kids   Responsibilities:

Development and Maintenance of time.com/money.com/fortune.com Developemnt of timeforkids.com Performance Improvement in various brands by upgrading technologies Managing digital subscriptions Automating regular manual jobs by using AWS tools Created micorservices in Node JS Created Reusable front end components in React JS Designed & developed the Backed of the website/application incorporating the state & web accessibility standards using Wordpress, PHP. Used Express.JS as a service for routing Involve in Change Management and Deployment activities in ACQUIA, AWS and Jenkins Creating REST webservices and consuming webservices which will be used in both internal and vendors Scrum Master Mentoring and Manage escalation. Identify operations opportunities and address them sharing with leadership. Continuous Improvement Reports & Operations Optimization (highlights). Root Cause Identification/Documentation. Migrated coderepos to GIT from SVN Created test suite using chalk Technologies: Wordpress, Node.JS, React JS, AWS, ACQUIA, AWS, PHP (Linux, Apache), MySQL, JavaScript, JQuery, AJAX, GIT, BitBucket., Express.JS Software Engineer hmhco.com June 2015 to August 2018 Project Title: Subscriptions Management Responsibilities: Development and Maintaince of multiple hmhco.com web based applications Identify and fixing perfomence issues Dealing with processing huge amount of data as a batch jobs Worked with REST API to create and consume web services. Designed & developed the Frontend of the website/application incorporating the state & web accessibility standards using Wordpress, MySQL, PHP, JavaScript, JQuery and CSS. Created REST API in Laravel Dealing Abode, and AWS web services Implement best caching technologies Defined Used Cases for several scenarios to help the project managers and the Quality Assurance team to the test out the application. Developed and configured several CRON jobs using Crontab utility in UNIX operating system. Prepared SDLC deliverables for this AGILE methodology project. Involved in assisting the project managers translating the business requirements into the Technical Specifications anticipating future enhancements to the applications. Technologies: PHP, JS, JQuery, JQuery Mobile, Ajax, CSS, HTML, Bright cove, Adobe Search and Pramote, AWS, Wordpress, Mac, Apache, MAMP Software Engineer Apple.com CA April 2013 to June 2015 Project Title: Global Data center services

Responsibilities: Designed Custom frontend for the website using various web designing applications such as PHP, CSS, JavaScript and JQuery. Worked closely with securing additional resource for the team and also worked in an Agile Environment. Worked with and maintained PHP database for the enhancement of the site and also wrote codes for the encryption of the data in the database. Designed and implemented user roles in PHP and MySQL and wrote JavaScript and JQuery scripts for minor bug fixes or errors. Analyze business requirements and change it into technical requirements to anticipate the future requirements. Worked with Management to create project specs and documentation and also designed, evaluated, enhanced, tested, troubleshoot and maintained PHP applications. Worked with financial platform and versioning software namely Git for software versioning and revision control system. Involved in designing the user interfaces using HTML and CSS and also worked on client side form validations using JavaScript. Understanding the old system with the upcoming new system and was also involved in Manual Testing. Designed and documented functional and technical documents and also helped the DBA with the performance, integrity and security of the Database. Migrated coderepos from SVN to GIT Technologies: PHP, JS, JQuery, JQuery Mobile, Ajax, CSS, HTML, SVN, GIT, Web services, CMS, Apple Connect, Mac, Apache, MAMP PHP Engineer Apple.com CA February 2011 to April 2013 Project Title: Apple iTunes Responsibilities:- Designed Custom frontend for the website using various web designing applications such as PHP, CSS, JavaScript and JQuery. Worked closely with securing additional resource for the team and also worked in an Agile Environment. Worked with and maintained PHP database for the enhancement of the site and also wrote codes for the encryption of the data in the database. Designed and implemented user roles in PHP and MySQL and wrote JavaScript and JQuery scripts for minor bug fixes or errors. Analyze business requirements and change it into technical requirements to anticipate the future requirements. Worked with Management to create project specs and documentation and also designed, evaluated, enhanced, tested, troubleshoot and maintained PHP applications. Worked with financial platform and versioning software namely Git for software versioning and revision control system. Involved in designing the user interfaces using HTML and CSS and also worked on client side form

validations using JavaScript. Understanding the old system with the upcoming new system and was also involved in Manual Testing. Designed and documented functional and technical documents and also Helped the DBA with the performance, integrity and security of the Database. Worked on REST API Technologies: PHP, JS, JQuery, JQuery Mobile, Ajax, CSS, HTML, SVN, Web services, CMS, Apple Connect, Mac, Apache, MAMP PHP Developer Quardev Inc - Seattle, WA October 2010 to February 2011 Project Title: Web portal Management Responsibilities;- Preparation & review of design documents, review of business logics. Rewrite the existing web pages using XHTML, OO PHP, MySQL, JavaScript, CSS, AJAX, JQuery. Implemented the web pages for news, feeds, reviews, galleries. Utilized cookies, sessions to reduce the database transactions and to improve the performance. Code review, preparation of unit test cases, and execution of the same. Follow up with customer, other teams involved on various stages of the project. Supported QA activities, bug fixes for the issues reported. Documented the User Guides and technical help html documents. Supported production patch moves, scheduled monitor of the systems involved. Technologies: PHP, MySQL, HTML, CSS, JQuery, JSON, web services, REST API, Mac Software Developer Fisher Investments - Camas, WA August 2009 to October 2010 Project Title: Web portal Management Responsibilities:- Solely responsible for creating and maintaining Opera web portal Developed many sub modules in Word press Wrote REST API to exchange data to Opera clients Integrated VPN Integrated online chat Wrote cron job for automating manual jobs Wrote custom news letter module Integrated PayPal Developed 10+ web based applications to Opera client Technologies: PHP, Word Press, MySQL, HTML, CSS, JQuery, JSON, web services, comet chat, Ubuntu, Apache Education Master in Computer Applications in Computer Applications Texas A&M University Skills Apache (9 years), CSS. (9 years), JQuery (9 years), MySQL (9 years), PHP. (9 years) Additional Information Technical Skills: Web Technologies: HTML, JavaScript, JQuery, React JS AJAX, JSX, ES6, JSON and CSS Open Source Technologies: WordPress, and Laravel, Drupal (7.x,) and Zend Server side scripting: PHP, Node JS Database: MySQL, PostgreSQL Servers: Apache and Nginx Web Services: SOAP, REST Payment Gateway: PayPal, Version Control: GIT, SVN Tools: JIRA, Bitbucket, Radar and

Rally OS: MS Windows 98/ XP/Vista/7, Mac, Ubuntu
