Lead UI Developer, Dynamics 365/CRM Consultant Lead UI Developer, Dynamics 365/CRM Consultant Dynamics 365/CRM Consultant, Lead UI Developer - Infosys Marietta, GA Work Experience Lead UI Developer, Dynamics 365/CRM Consultant Infosys 2018 to Present Collaborate with clients to determine and document their business and technical requirements Customize and configure system according to client's specifications Setup integration with Microsoft products. Create HTML pages styling with CSS3 Manipulate functionality using JavaScript Make API calls to pull data from databases Freelance Developer 2016 to Present Ravenous - Business Search site connected to Yelp API ? Look up businesses and get their reviews. ? React, CSS3, HTML5, JavaScript, Yelp API ? Fetch is used to get information based on search terms via the Yelp API. The returned information is mapped resulting in an array of returned businesses. ReactJS then maps through the array of businesses and creates individual business cards which are displayed on the screen. ? CSS3 is used to style the elements of the site. Code: https://github.com/havisk/Ravenous---React Website: http://diz-info.surge.sh/ ? Drum Machine - A virtual instrument ? A 9-pad virtual drum machine ? HTML5 uses keycodes for keyboard keys set to 'data-keys' to connect to the audio element that has the key-data attribute to trigger sound source ? Vanilla JavaScript - has an add event listener on the window that listens for a key down event that gives the key code. Then a query selector is used to see if an audio element with the matching key code exists. If it does the sound plays. Also has a query selector for the key that adds a class to trigger the animation. All keys are queried and given a transition end which calls a function that removes the animation class. ? CSS has transition property to change the size and border color of the pad when the corresponding keyboard key is pressed. Code: https://github.com/havisk/DrumMachine-App Website: http://drum-machine.surge.sh/ ? Test Your Memory - A picture memory game ? A memory matching game using the icons from the Big Ten collegiate conference. The title animates with every match ? JavaScript, Kute.JS, CSS3, HTML5, and Bootstrap ? An array of the school mascots is created and concatenated with itself to create the solution array. The shuffle array function shuffles the solution array. The gameboard is created by iterating through the solution array and displaying the cards on the screen. A JavaScript function

checks if two cards are flipped over. If the cards match, Kute.JS (animation library) is triggered to perform an animation. The pick again function then runs a sore is kept. If the cards do not match, they cards flip back over after one second. Once the tallied score equals the length of the mascot array, the game is over. Code: https://github.com/havisk/Memory-Game Website: http://big10_memory_game.surge.sh/ Act as subject matter expert as it pertains to Cyber Security CareerBuilder 2016 to 2018 2016 - 2018   Enforce CareerBuilder Terms and Conditions   Monitor account holders' activities by way of IP tracking   Mitigate threats by employing proactive search tactics   Review ecommerce orders for fraudulent activity   Address employer or job seeker issues via email or phone   Act as subject matter expert as it pertains to Cyber Security   Improve efficiency and reliability by proposing changes and updates to processes MS Dynamics CRM Specialist (Contract) American College of Rheumatology - Atlanta, GA 2015 to 2016 Advised clients on CRM features and system use to help them identify their best solution ?
