Java Developer Java Developer Java Developer - Aptiv Automotive Solutions San Francisco Bay Area, CA   Around 6 years of experience building high-quality applications for a multitude of diverse clientsin core Java and Java EE software development. Solid background with algorithm and data structure.   Extensive IT experience in server-side development, distributed software architecture, object-oriented design, messaging middleware and relational databases.   Experienced in the development, implementation, and maintenance of web and distributed Enterprise applications using Java/J2EE technologies.   Solid Java OOP programming skills like multi-threading, class loading, generics.   Expertise in server-side development with JDBC, Servlets, Java Beans, RMI. Expertise in working with Core Java concepts like Collections, Multithreading, Data Structures, Exception Handling, and Serialization.   Experience in NoSQL databases like MongoDB Experience with Virtualization/containerization using Docker containers   Experience in MVC architecture, Spring framework, J2EE Design Patterns, Spring IOC, Spring Boot, Spring Security, Java Server Faces and Hibernate.   Used and working with RESTful web services.   Working knowledge of HTML, CSS, JavaScript, Angular 2 and AJAX.   Familiar with UI components such as Popup Dialog, ViewPager, Button, TextView, ImageView, Gallery, ListView, GridView, and CardView.   Skilled in analyzing and defining solutions to increase efficiencies and reduce redundancy   Specialize in Enterprise Application Integration and Agile Methodologies.   Team player with good communication, interpersonal and analytical skills Work Experience Java Developer Aptiv Automotive Solutions - Mountain View, CA March 2018 to Present Worked on Hardware-In-Loop and Software-In-Loop project for customer Audi and BMW   Used OOAD Technology, classes are designed in UML with the help of Rational Rose.   Used Spring MVC framework to build RESTful web services.   Developed and deployed business logic using Session Beans and Servlets.   Created web pages and client side validations using HTML5 and CSS3 and JavaScript, AJAX, JSP.   Used Hibernate framework for back end development and Spring dependency injection for middle layer development.   Implemented core Java code with data structures and algorithms to the back-end.   Involved in debugging the application.   Used Maven to compile and generate EAR, WAR, and JAR files.   Created custom exception classes to display

appropriate error messages.   Used JUnit for white box testing of the application. Created test conditions/test data.   Used Log4j for logging errors and publishing logging information to various destinations.   Used Jenkins for continuous deployment.   Developed the system interface with web services and JMS   Technologies: Java, J2EE, Spring Boot, JSP, HTML, Hibernate, JQuery, JMS, UML, JUnit, Jenkins, Unix, Git. Java Developer Aptiv Automotive Solutions - Mountain View, CA January 2017 to March 2018 Worked on Project Management Portal provides holistic views of ongoing projects.   Used Spring MVC framework to build RESTful web services.   Participated in various stages of the project life cycle, mainly design, implementation testing, deployment and enhancement of the application   Developed complex RESTful web services using Spring framework for extracting product and warranty information.   Implemented business logic using Session Beans, Servlets.   Development of persistent components using Hibernate 3.0.   Optimized the data model objects with core Java code.   Wrote SQL queries, PL/SQL stored procedures and modifications to an existing database   Combined HttpClient and JWTs implement app authentication   Embedded an online chat in the web application with Node.js   Developed service side Service of the mobile and web application with Node.js and Express   Used MongoDB to store JSON format information   Used JUnit/Eclipse for the unit testing of various modules.   Used Jenkins for CI and deployment.   Developed content management system interface with Java API Technologies: Java, J2EE, Spring, JSP, HTML, Hibernate, JQuery, MongoDB, JUnit, Jenkins, Unix, Git. Java Developer Honeywell Technology Solutions - Bengaluru, Karnataka June 2013 to December 2016 Worked on the development of Honey Comb and Whiteboard Broadcast applications.   Participated in various stages of the project life cycle, mainly design, implementation testing, deployment and enhancement of the application   Developed complex RESTful web services using Spring framework for extracting product and warranty information. Implemented business logic using Session Beans, Servlets.   Optimized the data model objects with core Java code.   Wrote SQL queries, PL/SQL stored procedures and modifications to an existing database   Combined HttpClient and JWTs implement app authentication   Used JUnit/Eclipse for the unit testing of various modules.   Used Jenkins for CI and deployment.   Developed content

management system interface with Java API   Technologies: Java, J2EE, EJB, jQuery, JavaScript, Spring, Hibernate, Jenkins, XML, Tomcat, Oracle, Eclipse Education Bachelor's in Computer Science in Computer Science Anna University Skills ECLIPSE, JAVA, HIBERNATE, SPRING, jQuery Additional Information TECHNICAL SKILLS: Languages: Java, Javascript, SQL Web: HTML(HTML5), CSS(CSS3), JavaScript, jQuery, Servlet Web Service: RESTFUL, XML, JSON Web-APP SERVER: Tomcat, Weblogic, WebSphere Frameworks:Spring, Spring Boot, Hibernate Databases: MS SQL, Oracle, DB2 Tools: UML, Eclipse, Tomcat Version Control: GIT Platforms: Windows, Linux, Mac OS
