Software Developer Software Developer Full Stack Developer Somerville, MA Authorized to work in the US for any employer Work Experience Software Developer First Help Financial - Newton, MA August 2018 to Present   Front End Development with Javascript technologies for in-house applications.   Occasional development of back-end scripts to automate processes during development of applications.   Development of re-usable plugins and libraries to reduce development time for implementation of certain features that will be required across all applications. Mobile Developer MentorBuddy - Remote March 2016 to Present Created the Mentor Buddy application. A social application for professionals to meet similar personnel in their industry and act as a mentor or a men-tee to each other.   Application was developed with Ionic Framework, AngularJS and firebase. Other third-party API including Auth0 for handling the user authentication and authorization. Used the Ionic Creator application to create a mockup and prototype of what our application will look like before proper development on AngularJS. Used Auth0 social connection authentication to assign a token to a user's session and a refresh to replace current token when user logs out of the application. A delegation token was also implemented to receive firebase secret key and pass user credentials to firebase on user signup.   Set up firebase as the mobile Saas platform and back-end of the mobile application. User data was stored in JSON tree structure when the firebase reference is called. Created several factory and services on AngularJS to make several request to the firebase database using the API methods for Angular fire. Integrated Brushwood API on the application for sending push notification and reminders to users of the application. Web/Mobile Developer Clearly Innovative Inc - Washington, DC August 2016 to August 2018 Created back-end applications/APIs in NodeJS, MongoDB and GraphQL to be consumed by front-end applications.   Created Mobile and web applications using Ionic Mobile and Angular 2+ with typescript. Consume data from Back-end systems written in NodeJS and PHP.   Implemented both front-end and back-end features features and behaviors on the application,which includes the cache management, handling mobile application life-cycle events when the user interacts with the application for efficient user experience.   Ensured front-end design (HTML5 and CSS customization) was uniform for both the iOS and android version of the application.   Created data

service with several methods to call external APIs pending on what data that was needed. Utilized several cordova plugins to provide and consume native/hardware capability on the application. Created other web applications consuming nodeJS based web services with angular 1 and 2+ as front- end. Developed websites with Drupal as back-end service. SAP CRM Consultant/Mobility Unisoft Infotech - Bangalore, Karnataka May 2013 to October 2013 Responsibilities Provided SAP CRM Middleware Support to EMVEE-Solar company to resolve operational and transaction related issues on the CRM system. Set-up the communication between the SAP ERP and SAP CRM systems using the remote function call(RFC) of CPG-100, a consumer-packaged good software solution. Replicated customer data, material data and configuration objects carried out on the SAP ECC end into the SAP CRM back-end system using middleware technologies provided by SAP. Data was replicated to enable SAP CRM become the leading system and carry out all marketing, sales ad service processes that were not existing on SAP ERP system. Configured the SAP CRM Web user interface and Interaction center for Customer service agents of Next Day Flyers in California to enable them handle multiple transactions on the same platform.
